# UMD QUALITY CRITERIA COMPUTE CAPABILITIES v4

Document identifier:	EGI-COMPUTE-QC-v4.doc
Date:	15/10/2012
Document Link:	https://documents.egi.eu/document/1153

Abstract

This document describes the Quality Criteria that all software of the UMD distribution must meet.

## **1 JOB EXECUTION**

#### 1.1 Job Execution Interface

Currently, there are different interfaces considered for the Job Execution Capability, although not interoperable several of them co-exist in the EGI Infrastructure. The implementations must support, at least, one of the interfaces listed.

Job Execution Interface		
ID	JOBEXEC_IFACE_1	
Description		Appliances must support (at least one of) the interfaces currently in e EGI Infrastructure or identified by the UMD Roadmap
Mandatory	YES	
Applicability	Job Execution A	ppliances
Input from Technology Provider	Implementation of one of the Job Execution Interface as defined in the UMD Roadmap. Ideally, a complete test suite of the Job Execution interfaces supported by the appliance. The test suite must include tests for all the documented functions, and for all functions, check both correct and invalid input and with valid and invalid credentials.	
Test	Pre-condition	Valid user credentials.
Description	Test	Test all interface functionality, with correct/incorrect input and with valid and invalid credentials.
	Expected Outcome	Log of all the operations performed. All the documented functions work as documented. Errors/exceptions should be generated as documented.
Pass/Fail Criteria	The Job Execution Appliance that claims to support an interface must pass complete tests for that interface (provided by the TP or by the verification team). If the API is not completely supported, this <b>must</b> be documented. The test suite must be executed without errors.	
	At least one of t	he following interfaces must be supported:
	• ARC-	CE gridFTP [R 11]
		M [R 12]
		ES [R 13]
	Globus GRAM5 [R 14]	
	OGSA BES [R 16]     UNICOPE LIAS (P 17)	
Related	UNICORE UAS [R 17] UMD Roadmap [R 1]	
Information		
Revision Log	V2: unification of several criteria regarding interfaces into this one. V3: removed DRMAA as possible interface.	

#### **1.2** Job Submission tests

The following tests propose example job descriptions using the gLite JDL format for the specification of jobs. These examples are just used for illustrative purposes. Each appliance should execute the tests using their native format.

Simple Job		
ID	JOBEXEC_JOB_1	
Description	Execute a simple	e job in the appliance.
Mandatory	YES	
Applicability	Job Execution A	ppliances
Input from Technology Provider	Support for the submission of a job with no input or output files.	
Test Description	Pre-condition Test	<pre>Valid user credentials (and delegation if needed in the system) Job submission of simple job:     Executable = /bin/sleep;     Arguments = "120";</pre>
	Expected Outcome	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the test passes correctly.	
Related Information		
<b>Revision Log</b>	V2: merged JOBEXEC_*_JOB_1 into this criterion.	

Simple Job w	le Job with input/output files	
ID	JOBEXEC_JOB_2	
Description	Execute a simpl	e job in the appliance that uses both input and output files.
Mandatory	YES	
Applicability	Job Execution A	Appliances
Input from Technology Provider	Support for the submission of a job with input or output files.	
Test Description	Pre-condition	Valid user credentials (and delegation if needed in the system) Non-empty files "myfile"
	Test	<pre>Job submission for job with input and output files: Executable = "/bin/ls"; Arguments = "-1"; StdOutput = "std.out"; StdError = "std.err"; InputSandbox = {"myfile"}; OutputSandbox = {"std.out", "std.err"};</pre>
	Expected Outcome	Job finishes correctly; output contains the listing of the directory including the input file with correct size. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail	Pass if the test passes correctly.	
Criteria		
Related Information		
<b>Revision Log</b>	V2: merged JOBEXEC_*_JOB_2 into this criterion.	

Cancel Job	ncel Job	
ID	JOBEXEC_JOB_3	
Description	Cancel a previou	usly submitted job.
Mandatory	YES	
Applicability	Job Execution A	ppliances
Input from Technology Provider	Support for the cancellation of a job. Job cancelling must be possible for all different states that the job may be, e.g. cancel the job when it's running or cancel the job when it's already done.	
Test Description	Pre-condition Test	Valid user credentials (and delegation if needed in the system) Job Submission and then cancellation. Possible description for job: Executable = "/bin/sleep"; Arguments = "20m";
	Expected Outcome	Job is submitted and then cancelled correctly. Unique Identifier for the submitted jobs, status log of the job. The job must be removed from the execution manager.
Pass/Fail Criteria	Pass if the appliance is able to cancel jobs for any previous state of the job. If the job is in the execution manager system, it should be completely removed, especially if it's running.	
Related Information		
<b>Revision Log</b>	V2: merged JOBEXEC_*_JOB_3 into this criterion. Added clarification	

Related

#### 1.3 Execution Manager Support

These QC refer to the interaction of the Job Execution Capability with the underlying execution manager (usually a LRMS) for the work items submitted.

Not Invasive	Not Invasive Deployment	
ID JOBEXEC_EXECMNGR_1		
<b>Description</b> Job Execution Appliances should not introduce any modifications to the execution manager or to the operations of the resources.		
Mandatory	YES	
Applicability         Job Execution Appliances		
Input from Technology Provider	Description of all needed, if any, modifications on the local resources in order to deploy the Job Execution Appliance.	
Pass/Fail Criteria	<ul> <li>Any modifications must be documented, especially invasive ones. Modifications to consider are:</li> <li>Installation of additional software at the WN is permitted as long as no extra services are run permanently at the WN.</li> </ul>	
	• Require the deployment of extra (shared) filesystems	

1 1 5	5
• Modification of the local submission m	echanism of jobs (e.g. require the
modification of prologue/epilogue scripts	s of the batch system)
• Require the creation of extra user accou	inte or add enacial privilages to a

• Require the creation of extra user accounts or add special privileges to a	
specific account.	
<ul> <li>Require inbound or outbound connectivity</li> </ul>	

Information	
<b>Revision Log</b>	V2: added inbound, outbound connectivity. Relax Pass/Fail criteria

Job Managen	nent		
ID	JOBEXEC_EX	ECMNGR_2	
Description		appliances must support the creation and management of work items	
	to an execution manager.		
Mandatory	YES		
Applicability	Job Execution A	ppliances	
Input from Technology Provider	<ul> <li>Appliances must be able to: <ul> <li>create new jobs</li> <li>retrieve the status of the jobs submitted by the appliance</li> <li>cancel jobs</li> <li>optionally, hold and resume jobs</li> </ul> </li> <li>The Appliance may perform these operations for individual jobs or for set of jobs in order to improve its performance (e.g. for retrieving the status instead of querying each of the individual jobs, do a single query for all jobs submitted for the appliance)</li> </ul>		
Test	Pre-condition	Configured system	
Description	Test	Create new job(s) in execution manager	
	Expected Outcome	New job(s) is created in the execution manager; id of job(s) returned	
	<b>Pre-condition</b>	Previously submitted job(s)	
	Test	Cancel job(s) in execution manager	
	Expected Outcome	Job(s) is cancelled successfully.	
	Pre-condition	Previously submitted job(s)	
	Test	Query status of previously submitted job(s)	
	Expected	Job (s) status is correctly fetched	
	Outcome		
Pass/Fail Criteria	<ul> <li>Pass if the Appliance correctly manages jobs in the underlying execution manager. Tests must be executed (and pass) for each of the execution managers the appliance supports. All appliances should provide support for, at least one, of the following systems: <ul> <li>Torque/PBS</li> <li>LSF</li> <li>SGE/OGE</li> <li>Slurm</li> </ul> </li> <li>Optionally, the appliance may support a <i>fork</i> execution manager (spawning processes in the appliance host)</li> </ul>		
Related Information			
<b>Revision Log</b>	V2: Major rewri	te of criterion specification.	

Information	Information Retrieval		
ID	JOBEXEC_EXECMNGR_3		
Description	Job Execution Appliances must be able to collect information from the underlying execution manager.		
Mandatory	YES		
Applicability	Job Execution A	ppliances	
Input from Technology Provider		information retrieval from execution manager. Information should be id GlueSchema representation.	
Test	Pre-condition	Configured system	
Description	Test	Get information from execution manager	
	Expected Outcome	Representation of the current information from the execution manager is generated.	
Pass/Fail Criteria	<ul> <li>Pass if the Appliance produces information for each of the supported execution managers. The information must include all mandatory attributes of the Computing Element related entities in GlueSchema. All appliances should provide support for, at least one, of the following systems: <ul> <li>Torque/PBS</li> <li>LSF</li> <li>SGE/OGE</li> <li>Slurm</li> </ul> </li> <li>Optionally, the appliance may support a <i>fork</i> execution manager (spawning processes</li> </ul>		
Related	in the appliance host) Information Capabilities QC		
Information			
<b>Revision Log</b>			

## 1.4 Availability/Scalability

Service Redundancy		
ID	JOBEXEC_AVAIL_1	
Description	More than one Job Execution Capability implementation should be able to access a single execution manager concurrently.	
Mandatory	YES	
Applicability	Job Execution Appliances	

Input from Technology Provider	Documentation on how to use more than one appliance instance accessing the same execution manager (if any special consideration must be taken into account) Test of concurrent access to same execution manager from at least two instances.	
Test Description	Pre-condition	More than one appliance instance configured to use the same execution manager
	Test	Submission of jobs to all configured appliances
	Expected Outcome	Jobs are executed without problems; they are not mixed up in any situation.
Pass/Fail Criteria	Pass if the documentation specifies the configuration steps for using more than one instance in the same execution manager. Tests passes correctly	
Related Information		
<b>Revision Log</b>	V2: Required do	ocumentation, changed ID

Self Disabling Mechanism		
ID	JOBEXEC_AVAIL_2	
Description	The Job Execution Capability should detect high load conditions and self-disable the job submission in order to maintain the quality of the service.	
Mandatory	NO	
Applicability	Job Execution A	ppliances
Input from Technology Provider	Self-disable mechanism under high-load scenarios. Ideally, stress test for the service that triggers a self-disabling mechanism.	
Test	Pre-condition	Correctly configured service.
Description	Test	Introduce high load into machine, submit job.
	Expected Outcome	High load situation is detected, job submission request is not allowed and message is sent to client.
Pass/Fail Criteria	Pass if the test executes as expected. The high load level should be configurable (e.g. CPU load > x, swap usage > y)	
Related Information		
Revision Log	Changed ID	

٦

Timely Job Status Updates		
ID	JOBEXEC_AVAIL_4	
Description	Job Execution Appliances should be able to report the job status within a reasonable time frame since the events that originate those statuses even in situations of high load	
Mandatory	NO	
Applicability	Job Execution Appliances	
Input from Technology Provider	Appliance must be able to report the status of the submitted jobs without big delays from the event that originates the status change (e.g. mark the job as running/done once the job enters the running/done status in the local batch system). Ideally TP provides a test for the service that asserts that the appliance is able to report immediately the job statuses under high load conditions (big number of concurrent jobs changing status)	
Pass/Fail Criteria	Pass if the appliance reports the new status in a maximum of 10 minutes after the event that generated the status change.	
Related Information		
<b>Revision Log</b>	V4: improved Pass/Fails Criteria	

## 2 PARALLEL JOB

### 2.1 Submission of parallel jobs

Outcome

#1391: Support for parallel jobs in JDL.

test.

Pass/Fail

Criteria

Related

Information

**Revision Log** 

The following tests propose example job descriptions using the gLite JDL format for the specification of jobs. These examples are just used for illustrative purposes. Each appliance should provide the tests using their native format.

Simple paral	llel job submission		
ID	PARALLEL_J	OB_1	
Description	Job Execution Appliances that also provide the Parallel Job Capability must allow users to submit a job requesting more than one execution slot.		
Mandatory	YES		
Applicability	Job Execution Appliances with Parallel Job Capability.		
Input from Technology	Support for the submission of parallel job, requesting more than 1 slot.		
Provider Test Description	Pre-condition Test	Valid user credentials (and delegation if needed in the system) Job submission: Executable = "/bin/sleep"; CPUNumber = 4; Arguments = "20";	
	Expected	Job finishes correctly. Unique Identifier for the submitted jobs,	

status log of the job. Correct number of slots are allocated

Test is executed correctly. Mapping of slots to machines/cores not relevant for the

V2: Unified PARALLEL\_JOB\_1, 3 & 4 into this criterion.

Single machi	hine parallel job submission		
ID	PARALLEL_JOB_2		
Description	Job Execution Appliances that also provide the Parallel Job Capability should allow users to submit a job requesting more than one execution slot in a single machine.		
Mandatory	NO		
Applicability	Job Execution A	ppliances with Parallel Job Capability.	
Input from Technology Provider		submission of parallel job, requesting more than 1 slot in a single a complete machine.	
Test Description	Pre-condition Test	<pre>Valid user credentials (and delegation if needed in the system) Job submission:     Executable = "/bin/sleep";     NodeNumber = 1;     SMPGranularity = 4; </pre>	
	Expected Outcome	Arguments = "20"; Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job. Correct number of slots are allocated in a single machine	
	Pre-condition Test	<pre>Valid user credentials (and delegation if needed in the system) Job submission:     Executable = "/bin/sleep";     NodeNumber = 1;     SMPGranularity = 4;     WholeNode = True;     Arguments = "20";</pre>	
	Expected Outcome	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job. Complete machine with the requested slots is allocated.	
Pass/Fail Criteria	Test is executed	correctly.	
Related Information			
<b>Revision Log</b>	V2: Unified PA	RALLEL_JOB_2 & 5.	

Fine grained	Fine grained mapping parallel job submission		
ID	PARALLEL_JOB_3		
Description	Job Execution Appliances that also provide the Parallel Job Capability should allow users to submit a job requesting a combination of slots per physical machine.		
Mandatory	NO		
Applicability	Job Execution Ap	ppliances with Parallel Job Capability.	
Input from Technology Provider	Support for the submission of parallel job requesting specific configurations of slots in several machines.		
Test Description		<pre>Valid user credentials (and delegation if needed in the system) Job submission:     Executable = "/bin/sleep";     NodeNumber = 5;     SMPGranularity = 2;     Arguments = "20"; Job finishes correctly. Unique Identifier for the submitted jobs,</pre>	
	-	status log of the job. Correct number of slots is allocated.	
Pass/Fail Criteria	Test is executed correctly for different combinations (e.g.: N processes in N different hosts, N processes in a single host, N processes per host in K hosts, K number of complete hosts with at least N slots)		
Related Information			
<b>Revision Log</b>	V2: Unified PAR	ALLEL_JOB_2 & 5.	

## 2.2 MPI support

Precompiled MPI job Execution		
PARALLEL_MPI_1		
Parallel Job Appliances must support the execution of MPI jobs.		
YES		
Parallel Job Appliances.		

Input from Technology Provider	Support for the submission of a MPI job with pre-existing binary.	
Test	<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. MPI Binary
Description	Test	Submission of a MPI job requesting more than one execution slot with MPI Binary included in input sandbox of job or already installed in the system (description of job depending on Job Execution interface)
	Expected Outcome	Job is submitted and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the test is provided and passes for all the MPI implementations supported. Support for Open MPI and MPICH2 should be included	
Related Information	User requirements: #672: MPI support	
<b>Revision Log</b>		

MPI job Execution from source.		
ID	PARALLEL_MPI_2	
Description	Parallel Job Appliances must support the execution of MPI jobs that are compiled at submission time.	
Mandatory	YES	
Applicability	Parallel Job App	oliances.
Input from Technology Provider	Support for the submission of a MPI job compiled from source during its execution.	
Test Description	Pre-condition	Valid User proxy and valid delegation in the service. Source code for MPI application.
	Test	Submission of a MPI job requesting more than one execution slot with MPI source code included in input sandbox of job (description of job depending on Job Execution interface). Prior to the execution of the application, the source must be compiled with the available compiler at the site.
	Expected Outcome	Job is submitted, compiled and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the test is provided and passes for all the MPI implementations supported. Support for Open MPI and MPICH2 should be included	
Related Information	User requirements: #672: MPI support	
<b>Revision Log</b>		

## 2.3 OpenMP support

Precompiled OpenMP job Execution			
ID	PARALLEL_OMP_1		
Description	Parallel Job Appliances must support the execution of OpenMP jobs.		
Mandatory	YES		
Applicability	Parallel Job Appliances.		

Input from Technology Provider	Support for the submission of an OpenMP job with pre-existing binary.	
Test Description	Pre-condition	Valid User proxy and valid delegation in the service. OpenMP Binary
	Test	Submission of an OpenMP job requesting more than one execution slot with OpenMP Binary included in input sandbox of job (description of job depending on Job Execution interface)
	Expected Outcome	Job is submitted and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the tes supported.	t is provided and passes for all the OpenMP implementations
Related Information		
<b>Revision Log</b>		

OpenMP job Execution from source		
ID	PARALLEL_OMP_2	
Description	Parallel Job Appliances must support the execution of OpenMP jobs that are compiled at submission time.	
Mandatory	YES	
Applicability	Parallel Job Appliances.	
Input from Technology Provider	Support for the submission of an OpenMP job that gets compiled at the remote site.	
Test Description	Pre-condition	Valid User proxy and valid delegation in the service. Source code for OpenMP application.
	Test	Submission of an OpenMP job requesting more than one execution slot with OpenMP source code included in input sandbox of job (description of job depending on Job Execution interface). Prior to the execution of the application, the source must be compiled with the available compiler at the site.
	Expected Outcome	Job is submitted, compiled and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the test is provided and passes for all the OpenMP implementations supported.	
Related Information		
<b>Revision Log</b>		

## **3** INTERACTIVE JOB MANAGEMENT

Interactive login		
ID	INTERACTIVE_JOB_1	
Description	Login interactively to a remote site using grid credentials	
Mandatory	NO	
Applicability	Interactive Job Management (Interactive Login)	
Input from Technology Provider	Tool for providing interactive login to remote machine using any of the supported authn/authz in the UMD Roadmap.	
Test Description	Pre-conditionValid user credentials (and delegation if needed in the system)TestInteractive login to remote siteExpectedLogin is performed and a shell is provided.OutcomeInteractive login to remote site	
Pass/Fail Criteria	Pass if the tool is able to perform the remote logins correctly using the grid credentials	
Related Information	gsissh, glogin UMD Roadmap Interactive Job Management [R 1]	
<b>Revision Log</b>		

Interactive Job Perusal			
ID	INTERACTIVE_JOB_2		
Description	Provide a mechanism for getting files produced by a job running in a remote site.		
Mandatory	NO		
Applicability	Interactive Job Management (Interactive Job Steering)		
-			
Input from Technology Provider	Mechanism that is able to retrieve the files produced by a job during its runtime. The provided service should be configurable to retrieve the files at periodic intervals of time. Files to retrieve <i>should</i> be configurable.		
Pass/Fail Criteria	Pass if the provided service is able to retrieve at periodic intervals job output files during the job execution.		
Related Information	WMS Job Perusal UMD Roadmap Interactive Job Management [R 1]		
<b>Revision Log</b>			

Interactive Job Monitoring			
ID	INTERACTIVE_JOB_3		
Description	Provide a mechanism for streaming files produced by a job running in a remote site.		
Mandatory	NO		
Applicability	Interactive Job Management (Interactive Job Steering)		
Input from Technology Provider	Mechanism that is able to stream the files produced by a job during its runtime. Ideally, the files to stream should be configurable. By default the standard output and error of the job should be used.		
Pass/Fail Criteria	Pass if the provided service is able to stream the job output files during the job execution.		
Related Information	globus-job-get-output, i2glogin UMD Roadmap Interactive Job Management [R 1] #1385: Interactive jobs monitoring		
<b>Revision Log</b>			

Interactive Job Steering			
ID	INTERACTIVE_JOB_4		
Description	Provide a mechanism for steering a job running in a remote site.		
Mandatory	NO		
Applicability	Interactive Job Management (Interactive Job Steering)		
Input from Technology Provider	Mechanism that is able to stream the files produced by a job during its runtime and to control the job execution (i.e. stream the job's standard input from the user location to the remote site).		
Pass/Fail Criteria	Pass if the provided service is able to control the job execution by creating a communication channel that forwards output/error and input streams between the user and the remote job		
Related Information	i2glogin UMD Roadmap Interactive Job Management [R 1]

## **4 JOB SCHEDULING**

#### 4.1 Job Scheduling Interface

The Job Scheduling Capabilities does not have a standard interface. Any implementation of this capability can support on of the Job Execution interfaces proposed by the OGF (DRMAA, BES) or proprietary interfaces (gLite WMS)

Job Scheduling Interface			
ID	JOBSCH_IFACE_1		
Description	Job Scheduling Appliances must support one of the interfaces currently in use or identified by the UMD Roadmap		
Mandatory	YES		
Applicability	Job Scheduling	Appliances	
Input from Technology Provider	Implementation of one of the Job Scheduling Interfaces as defined in the UMD Roadmap. Ideally, a complete test suite of the Job Execution interfaces supported by the appliance. The test suite must include tests for all the documented functions, and for all functions, check both correct and invalid input and with valid and invalid credentials.		
Test	Pre-condition	Valid user credentials.	
Description	Test	Test all interface functionality, with correct/incorrect input and with valid and invalid credentials.	
	Expected Outcome	Log of all the operations performed. All the documented functions work as documented.	
Pass/Fail Criteria	The Job Scheduling Appliance that claims to support an interface must pass complete tests for that interface (provided by the TP or by the verification team). If the API is not completely supported, this <b>must</b> be documented. The test suite must be executed without errors.		
	At least one of the following interfaces must be provided:		
	•	WMS [R 18]	
		• OGF DRMAA [R 15]	
		• OGSA BES [R 16]	
Related Information	UMD Roadmap	UMD Roadmap Job Scheduling Capability	
<b>Revision Log</b>	V2: Merged all the interface related criteria into this.		

## 4.2 Job Execution Capability Support

Remote Job Management			
ID	JOBSCH_EXE	C_1	
Description	Job Scheduling to an Job Execut	Appliances must support the creation and management of work items ion Appliance	
Mandatory	YES		
Applicability	Job Scheduling	Appliances	
Input from Technology Provider	<ul> <li>cancel je</li> <li>optional</li> <li>The Appliance r</li> <li>or for set of job</li> </ul>	ew jobs the status of the jobs submitted by the appliance obs ly, hold and resume jobs nay perform these operations for individually for each submitted job s in order to improve its performance (e.g. for retrieving the status ying each of the individual jobs, do a single query for all jobs	
Test Description	Pre-condition Test	Configured system Create new job(s) in job execution appliance	
	Expected Outcome	New job(s) is created in the job execution appliance; id of job(s) returned	
	Pre-condition	Previously submitted job(s)	
	Test	Cancel job(s) in job execution appliance.	
	Expected Outcome	Job(s) is cancelled successfully.	
	Pre-condition	Previously submitted job(s)	
	Test	Query status of previously submitted job(s)	
	Expected Outcome	Job (s) status is correctly fetched	
Pass/Fail Criteria	Pass if the Appliance correctly manages jobs in the job execution appliances. Tests must be executed (and pass) for each of the job execution appliances supported.		
		he following interfaces must be supported:	
		CE gridFTP [R 11]	
	<ul> <li>CREAM [R 12]</li> <li>EMI-ES [R 13]</li> </ul>		
	<ul> <li>Globus GRAM5 [R 14]</li> </ul>		
		DRMAA [R 15]

Remote Resource Information GlueSchema 1.3		
ID	JOBSCH_EXEC_2	
Description	Job Scheduling Appliances must be able to use the resource descriptions using the current Information Model and Information Discovery interfaces.	
Mandatory	YES	
Applicability	Job Scheduling Appliances	
	A	the discourse described with the second Left of the second s
Input from Technology Provider	Appliances must handle resources described with the current Information Model (GlueSchema1.3) and Information Discovery (LDAPv3) interfaces.	
Test	Pre-condition	Configured system
Description	Test	Fetch information from Information Discovery Appliance.
	Expected Outcome	Information is fetched correctly; resources described are added to the list of possible resources to use (i.e. found in a list-match).
Pass/Fail Criteria	Pass if the Appliance correctly fetches information from Information Discovery appliances and is able to use the resources described by GlueSchema v1.3	
Related Information	Information Capabilities in the UMD Roadmap [R 1]	
<b>Revision Log</b>	V4: Split into tw	o different criteria for glueschema versions.

Pass/Fail

Criteria

Remote Resource Information GlueSchema 2.0		
ID	JOBSCH_EXEC_3	
Description	Job Scheduling Appliances must be able to use the resource descriptions using the current Information Model and Information Discovery interfaces.	
Mandatory	YES	
Applicability	Job Scheduling Appliances	
Input from Technology Provider	Appliances must handle resources described with the current Information Model (GlueSchema2.0) and Information Discovery (LDAPv3) interfaces.	
Test	<b>Pre-condition</b>	Configured system
Description	Test	Fetch information from Information Discovery Appliance.
	Expected Outcome	Information is fetched correctly; resources described are added to the list of possible resources to use (i.e. found in a list-match)

Pass if the Appliance correctly fetches information from Information Discovery

appliances and is able to use the resources described by GlueSchema v2.0

Information Capabilities in the UMD Roadmap [R 1]

#### 4.3 End-to-end job submission tests

The following tests propose example job descriptions using the gLite JDL format for the specification of jobs. These examples are just used for illustrative purposes. Each appliance should execute the tests using their native format.

Simple Job		
ID	JOBSCH_JOB_1	
Description	Execute a simple job.	
Mandatory	YES	
Applicability	Job Scheduling Appliances	
Input from Technology Provider	Support for the submission of a job with no input or output files.	
Test Description	Pre-condition Test	Valid user credentials (and delegation if needed in the system) Job submission of simple job: Executable = /bin/sleep; Arguments = "120";
	Expected Outcome	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail Criteria	Pass if the test passes correctly.	
Related Information		
<b>Revision Log</b>	V2: moved specific WMS criteria to generic to all Job Scheduling	

Simple Job with input/output files		
ID	JOBSCH_JOB_2	
Description	Execute a simple job that uses both input and output files.	
Mandatory	YES	
Applicability	Job Scheduling Appliances	
Input from Technology Provider	Support for the submission of a job with input or output files.	
Test Description	Pre-condition	Valid user credentials (and delegation if needed in the system) Non-empty file "myfile"
	Test	<pre>Job submission for job with input and output files: Executable = "/bin/ls"; Arguments = "-l"; StdOutput = "std.out"; StdError = "std.err"; InputSandbox = {"myfile"}; OutputSandbox = {"std.out", "std.err"};</pre>
	Expected Outcome	Job finishes correctly; output contains the listing of the directory including the input file with correct size. Unique Identifier for the submitted jobs, status log of the job.
Pass/Fail	Pass if the test passes correctly.	
Criteria		
Related Information		
<b>Revision Log</b>	V2: moved specific WMS criteria to generic.	

Cancel Job		
ID	JOBSCH_JOB_3	
Description	Cancel a previou	usly submitted job.
Mandatory	YES	
Applicability	Job Scheduling	Appliances
Input from Technology Provider	Support for the cancellation of a job. Job cancelling must be supported for the different states that the job may be, e.g. cancel the job when it's running or cancel the job when it's already done.	
Test Description	Pre-condition Test	<pre>Valid user credentials (and delegation if needed in the system) Job Submission and then cancellation. Possible description for job:     Executable = "/bin/sleep";     Arguments = "20m";</pre>
	Expected Outcome	Job is submitted and then cancelled correctly. Unique Identifier for the submitted jobs, status log of the job. Job is removed from remote Job Execution Appliance.
Pass/Fail Criteria	Pass if the appliance is able to cancel jobs for any previous state of the job. If the job is already submitted to a Job Execution Appliance, it should be completely removed from it, especially if it's running.	
Related Information		
<b>Revision Log</b>	V2: moved specific WMS criteria to generic to all Job Scheduling	

Parallel Job			
ID	JOBSCH_JOB_4		
Description	Execute a parall	Execute a parallel job.	
Mandatory	NO		
Applicability	Job Scheduling Appliances with Parallel Job Support.		
Input from Technology Provider	Support for the submission of a job with input or output files.		
Test Description	Pre-condition Test	<pre>Valid user credentials (and delegation if needed in the system) Job Submission or parallel job. Possible description for job:     Executable = "/bin/sleep";     CPUNumber = 2;     Arguments = "20";</pre>	
	Expected Outcome	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job. Correct number of slots is allocated at the remote site.	
Pass/Fail	Pass if the test passes correctly.		
Criteria			
Related Information			
<b>Revision Log</b>	V2: moved specific WMS criteria to generic to all Job Scheduling		

Job List Match		
ID	JOBSCH_JOB_5	
Description	List the available	e resources for a given job.
Mandatory	YES	
Applicability	Job Scheduling Appliances	
Input from Technology Provider	Support for the list match of a job.	
Test	Pre-condition	Valid user credentials and delegation in the service.
Description	Test	<pre>Job list match for job with requirements and rank expressions, for example: Executable = "/bin/sleep"; Requirements = other.GlueCEStateStatus = "Production"; Rank = -other.GlueCEStateEstimatedResponseTime;</pre>
	Expected Outcome	List of available resources for execution (with correct rank) is returned.
Pass/Fail Criteria	The Job Scheduling Appliance must return a list of available resources for the execution of any given job. Optionally, a <i>rank</i> defined by the user is returned by each of the resources.	
Related Information		
<b>Revision Log</b>	V2: moved specific WMS criteria to generic to all Job Scheduling	

Parametric Job Submission		
ID	JOBSCH_JOB_6	
Description	Execute a parametric job.	
Mandatory	NO	
Applicability	Job Scheduling Appliances with support for parametric jobs.	
Input from Technology Provider	Support for the submission of parametric jobs.	
Test	Pre-condition	Valid user credentials (and delegation if needed in the system)
Description	Test	Job submission of job with numeric parameters (e.g. Parameters = 10000;ParameterStart = 1000; ParameterStep = 10;).
	Expected Outcome	Job is executed correctly. List of JobIds for the parametric jobs and each of the subjobs is obtained; all states of the jobs must be logged correctly.
	Pre-condition	Valid user credentials (and delegation if needed in the system)
	Test	Job submission of job with a list of parameters (e.g. Parameters={A, B, C,}).
	Expected Outcome	Job is executed correctly. List of JobIds for the parametric jobs and each of the subjobs is obtained; all states of the jobs must be logged correctly.
Pass/Fail	Pass if the test passes correctly.	
Criteria		
Related Information		
<b>Revision Log</b>	V2: moved specific WMS criteria to generic to all Job Scheduling	

Job Collection Submission		
ID	JOBSCH_JOB_7	
Description	Execute a job co	ollection
Mandatory	NO	
Applicability	Job Scheduling	Appliances with support for job collections.
Input from Technology Provider	Support for the submission of job collections.	
Test Description	Pre-condition Test Expected Outcome	Valid user credentials (and delegation if needed in the system) Job submission for job collection. Job is executed correctly. List of JobIds for the job collections and each of the subjobs is obtained; all states of the jobs must be logged
Pass/Fail Criteria	Pass if the test passes correctly.	
Related Information		
<b>Revision Log</b>	V2: moved spec	ific WMS criteria to generic to all Job Scheduling

DAG Submiss	sion		
ID	JOBSCH_JOB_8		
Description	Execute a DAG	job.	
Mandatory	NO		
Applicability	Job Scheduling	Appliances with support for DAGs.	
Input from Technology Provider	Support for the submission of DAGs.		
Test	<b>Pre-condition</b>	Valid user credentials and delegation in the service.	
Description	Test	Job submission for DAG.	
	Expected Outcome	Job is executed correctly. List of JobIds for DAG and each of the subjobs is obtained; all states of the jobs must be logged correctly.	
Pass/Fail	Pass if the test passes correctly. DAGs must be able to use any of the Job Execution		
Criteria	Interfaces supported by the Job Scheduling Appliance. Explicit test this possibility.		
Related Information			
<b>Revision Log</b>	V2: moved spec	ific WMS criteria to generic to all Job Scheduling	

### 4.4 gLite WMS

This section includes criteria applicable to the gLite WMS system.

Proxy Renewal			
ID	JOBSCH_WMS_1		
Description	The WMS must	manage the user credentials and renew them if necessary.	
Mandatory	YES		
Applicability	gLite WMS Job	Scheduling Appliances.	
Input from Technology Provider	Support for the proxy renewal mechanism for long running jobs.		
Test Description	Pre-condition	Valid user credentials with short duration (e.g. 30 min) and delegation in the service. Credentials Renewal service available.	
	Test	Submit job that takes longer to complete that the credential lifetime (e.g. 1 hour)	
	Expected Outcome	Job executes successfully. The scheduling services should perform a proxy renewal and state it in the log messages (if there is an error, log it also). Output of the job, and status messages stating the renewal of the user credentials.	
	Pre-condition	Valid user credentials with short duration, e.g. 30 min, no renewal service.	
	Test	Submit job that takes longer to complete that the credential lifetime (e.g. 1 hour)	
	Expected Outcome	Job does not complete successfully. Log of operations and status of the job updated with information about the error (no renewal possible)	
Pass/Fail Criteria		Will Pass if the proxy renewal is done, or if there is an error logged stating the problem. Will fail if there is no clear information about the process.	
Related Information			
<b>Revision Log</b>			

Job Resubmission			
ID	JOBSCH_WM	JOBSCH_WMS_2	
Description		es (due to resource malfunctioning or the job itself) must be a configurable amount of retrials.	
Mandatory	NO		
Applicability	gLite WMS Job	Scheduling Appliances.	
Input from Technology Provider	Support for the resubmission mechanism of the WMS.		
Test	Pre-condition	Valid user credentials and delegation in the service.	
Description	Test	Job submission that fails due to simulated remote resource malfunctioning.	
	Expected Outcome	Job is resubmitted to other resource. Log of all failures and a complete trace of the job.	
	Pre-condition	Valid user credentials and delegation in the service.	
	Test	Job submission for job that always fails (e.g. exit code 1)	
	Expected Outcome	Job is resubmitted until resubmission attempts reach the configured limit. Log of all failures and a complete trace of the job.	
Pass/Fail Criteria	Job failures due to resource malfunctioning and not to the job itself must be resubmitted to other resources, with a configurable amount of repetitions. In the case of job failures due to the job itself must be resubmitted with a configurable amount of repetitions. In both situations, status must reflect clearly what is the cause of resubmission, new resource selected and attempt number		
Related Information	Requirements gathered in MS305 related to resubmission of jobs, and information provided in error messages.		
<b>Revision Log</b>	V2: originally J0	DBEXEC_WMS_JOB_9	

JDL Acceptance Limits		
ID	JOBSCH_WMS_3	
Description	The service shou	ald accept JDLs without size restrictions
Mandatory	NO	
Applicability	gLite WMS Job	Scheduling Appliances.
Input from Technology Provider	A test to submit a job and check if it is accepted or rejected, specially for big JDLs.	
Test	<b>Pre-condition</b>	Valid user credentials and delegation in the service.
Description	Test	Submission of job descriptions (specially large)
	Expected Outcome	Normal job submission if everything is correct; an error message if any problem arises.
Pass/Fail Criteria	Will Pass if JDL is correct, and submits the job or if there is a report on a known syntax error in the jdl. Will Fail if a wrong Jdl is accepted or if it crashes	
Related Information	Requirements gathered in MS305 related to resubmission of jobs, and information provided in error messages.	
<b>Revision Log</b>	V2: originally J0	DBEXEC_WMS_JOB_10

# 4.4.1 Security Advisories

Security Adv	isory 1502
ID	JOBSCH_WMS_SEC_1
Description	Steal of proxies is possible without leaving trace.
Mandatory	YES
Applicability	gLite WMS Job Scheduling Appliances.
Input from Technology Provider	Test that assures the problem described in the SVG Advisory 1502 (proxy stealing) is fixed.
Pass/Fail Criteria	Fix for Advisory-SVG-2011-1502 is provided. A test that proves that the fix is provided should be also present.
Related Information	Advisory-SVG-2011-1502 (https://wiki.egi.eu/wiki/SVG:Advisory-SVG-2011-1502)
Revision Log	

#### 4.4.2 Bugs

Long Proxy C	roxy Chain Support		
ID	JOBSCH_WMS_BUG_1		
Description	Long proxy chain	ns should be supported without no issues.	
Mandatory	YES		
Applicability	gLite WMS Job S	Scheduling Appliances.	
Input from Technology Provider	Support for long proxy chains such as the ones created when using myproxy (C=[]/CN=proxy/CN=proxy/CN=proxy)		
Test Description	Pre-condition Test Expected Outcome	Valid authorized user credentials with long proxy chain. Delegation of proxy into service. Delegation is performed without issues.	
Pass/Fail Criteria	No authorization errors (for authorized users) given when using long proxy chains.		
Related Information	GGUS Ticket: #7	73035	
<b>Revision Log</b>			

Multiple Role/Group Proxy Support		
ID	JOBSCH_WMS_BUG_2	
Description	Proxies of users	belonging to multiple groups should be accepted.
Mandatory	YES	
Applicability	gLite WMS Job	Scheduling Appliances.
Input from Technology Provider	Support for renewal of proxies with multiple groups must be allowed.	
Test Description	Pre-condition Test Expected Outcome	Valid user proxy with multiple groups. Delegation of proxy into service, renewal of the delegation. Delegation and renewal are performed without issues.
Pass/Fail Criteria	Pass of the delegation and renewal are performed correctly for multiple group proxies.	
Related Information	GGUS Ticket: #78892	
<b>Revision Log</b>		

## 4.5 Service availability, monitoring and error handling.

Error Messag	Error Messages		
ID	JOBSCH_SERVICE_1		
Description	Error messages provided by the service should be clear and facilitate the solution of those errors by users or service administrators		
Mandatory	NO		
Applicability	Job Scheduling Appliances.		
Input from Technology	Include in documentation, a list of possible errors and possible solution/cause for it. For errors that may reach the user, this list has to be exhaustive.		

Technology	For errors that may reach the user, this list has to be exhaustive.		
Provider			
Pass/Fail	Will pass if the list of errors is documented and includes information about:		
Criteria	• Error code		
	• Error message (if applicable)		
	• Error source (internal module or remote resource (specify it explicitly))		
	• Cause of error (syntax error, module malfunctioning, configuration problem, network error, other (specify it explicit))		
	• Type (critical, informative)		
	Possible solution		
Related	Requirements gathered in MS305 related to resubmission of jobs, and information		
Information	provided in error messages.		
<b>Revision Log</b>			

Service Information		
ID	JOBSCH_SERVICE_2	
Description	Job Scheduling Appliances must be able to generate information about the provided service that can be used in a Information Discovery Appliance.	
Mandatory	NO	
Applicability	Job Scheduling	Appliances.
Input from Technology Provider	Support for information generation about the service status.	
Test Description	Pre-condition Test	Configured system, Information Discovery appliance available. Generate service information and publish to Information Discovery Appliance. Access Info Discovery Appliance.
	Expected Outcome	Information is produced and can be accessed through the Information Discovery Appliance.
Pass/Fail Criteria	Test is provided and executed as expected.	
Related Information	Requirements gathered in MS305 related to resubmission of jobs, and information provided in error messages.	
<b>Revision Log</b>		

Self Disabling	Self Disabling Mechanism		
ID	JOBSCH_SERVICE_3		
Description	The Job Scheduling Capability should detect high load conditions and self-disable the job submission in order to maintain the quality of the service.		
Mandatory	NO		
Applicability	Job Scheduling	Appliances	
Input from Technology Provider	Support for self-disabling mechanism under high load conditions. Ideally, stress test for the service that triggers a self-disabling mechanism.		
Test	Pre-condition	Correctly configured service.	
Description	Test	Introduce high load into machine, submit job.	
	Expected Outcome	High load situation is detected, job submission request is not allowed and message is sent to client.	
Pass/Fail Criteria	Pass if the test executes as expected. The high load level should be configurable (e.g. CPU load > x, swap usage > y)		
Related	User requirements:		
Information	#698: WMS stability and performance		
	#702: Stability of UMD services and improvements		
<b>Revision Log</b>	V2: Changed ID	(from JOBSCH_SERVICE_4 to JOBSCH_SERVICE_3)	

Job Submission Peaks		
ID	JOBSCH_SERVICE_4	
Description	Job Scheduling Appliances should be able to handle high job submission rates of several hundreds jobs in short intervals.	
Mandatory	NO	
Applicability	Job Scheduling Appliances	
Input from Technology Provider	Appliance should be able to handle a high number of jobs submitted in a short time interval (e.g. 500 jobs / minute). Ideally, test the service to assert that this is provided	
Pass/Fail Criteria	Appliances should be able to handle job bursts of several hundreds of jobs in short intervals.	
Related Information	User requirements: #698: WMS stability and performance	
<b>Revision Log</b>		

Timely Job Status Updates		
ID	JOBSCH_SERVICE_5	
Description	Job Scheduling Appliances should be able to report the job status within a reasonable time frame since the events that originate those statuses even in situations of high load	
Mandatory	NO	
Applicability	Job Execution Appliances	
r		
Input from Technology Provider	Appliance must be able to report the status of the submitted jobs without big delays from the event that originates the status change (e.g. mark the job as running/done once the job enters the running/done status in the local batch system). Ideally TP provides a test for the service that asserts that the appliance is able to report immediately the job statuses under high load conditions (big number of concurrent jobs changing status)	
Pass/Fail Criteria	Appliances <i>should</i> be able to report the status immediately after the event that generated the status change.	
Related Information	User requirements: #698: WMS stability and performance.
