

Status of middleware deployment

OMB February 2012
Peter Solagna – EGI.eu

- Current status of services deployment
 - Services list and versions, where possible, where extracted from the information system
- When I refer to EMI products in these slides in general I refer to the gLite stack
 - Non gLite middlewares do not publish detailed information in the BDII, therefore I was able to extract less details
 - Mainly from GOCDB

Overview of the EMI products deployment vs gLite 3.x

- Worker nodes are not publishing themselves in the information system
 - Hard to gather precise information about the deployment scenario
 - Used the pakiti database to find the installed packages
 - 12 sites in production seem to have deployed EMI-WN
 - A total of 3900 cores
 - 1.4% of the cores in the integrated infrastructure

- Currently there are 52 VOMS registered in GOCDB for the integrated infrastructure
- 17 VOMS Publishing their version in the Top-BDII:
 - 7 gLite 3.2
 - 8 EMI
- The remaining 40 VOMS are not publishing the version.

Top-BDIs: 102 instances

- In GOCDB there are 102 Top-BDIs registered
 - Many of them are not correctly publishing the version

Lcg-CE: 142 instances

- 316 CREAM CEs

Central LFC: 41 instances

gLite 3.x

■ gLite 3.x

StoRM: 51 instances

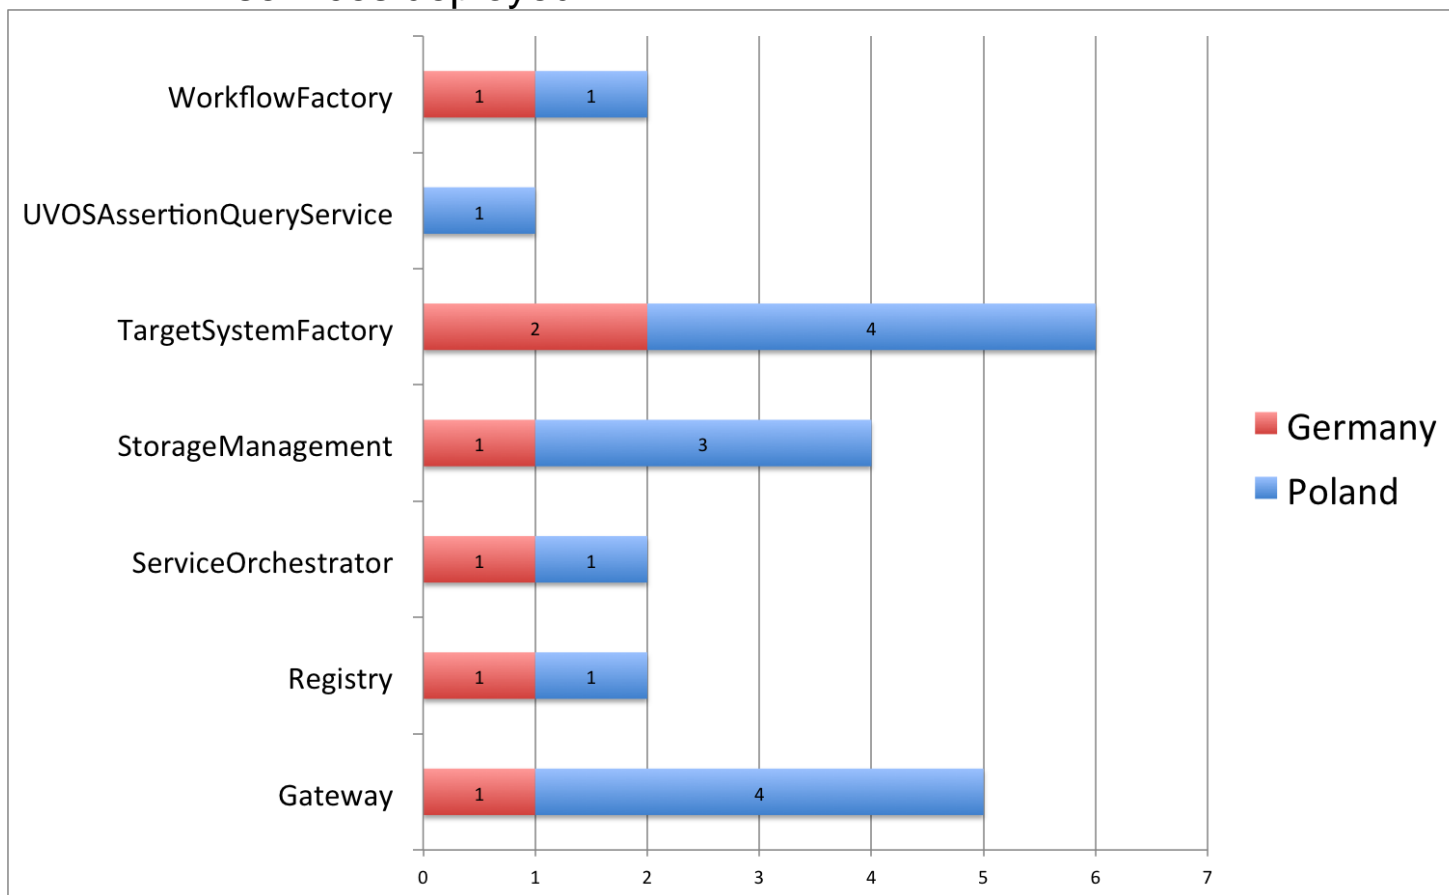

dCache: 67 instances

- ARC-CEs are not publishing the version in the information system

- UNICORE is not published in the info sys
 - 6 sites (Germany and Poland)
 - 22 services deployed

Globus services: 18 in GOCDB
