## UMD COMPUTE CAPABILITIES QUALITY CRITERIA v1.2

---

Document identifier:	EGI-COMPUTE-QC-V1.2.docx
Date:	<b>09/02/2011</b>
Document Link:	<a href="https://documents.egi.eu/document/240">https://documents.egi.eu/document/240</a>

---

### Abstract

This document describes the Quality Criteria for the Compute Capabilities identified in the UMD Roadmap.

## 1 JOB EXECUTION

The Compute Capability relates to the ability to describe, submit, manage and monitor a work item on a specific site submitted for either queued batch or interactive execution. Currently, there are different interfaces considered for the Compute Capability. The implementations must support, at least, one of them.

### 1.1 CREAM Interface

These QC refer to implementation of the Compute capability using the CREAM interface [R 5]. May be deprecated in future versions of the QC.

<b>Cream API TestSuite</b>	
<b>ID</b>	<b>JOBEXEC_CREAM_API_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with CREAM interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the all the functions of the CREAM interface.	
<b>Input from TP</b>	
Complete Test suite for the CREAM API. It must include tests for all the documented functions in the CREAM WSDL.	
For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all CREAM functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b>	
Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

### 1.1.1 Job Submission tests

The following job submission tests use the gLite JDL format for the specification of jobs.

<b>Simple Job Submission</b>	
<b>ID</b>	<b>JOBEXEC_CREAM_JOB_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with CREAM interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job.	
<b>Input from TP</b>	
Test for the submission of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Job submission of simple job: Executable = /bin/sleep; Arguments = "120";
<b>Expected Outcome</b>	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Simple Job Submission with files</b>	
<b>ID</b>	<b>JOBEXEC_CREAM_JOB_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with CREAM interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job with input and output files.	
<b>Input from TP</b>	
Test for the submission of a job with input and output files.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. Non-empty file "myfile"
<b>Test</b>	Job submission for job with input and output files: <pre>Executable = "/bin/ls"; Arguments = "-l"; StdOutput = "std.out"; StdError = "std.err"; InputSandbox = {"myfile"}; OutputSandbox = {"std.out", "std.err"};Job Submission</pre>
<b>Expected Outcome</b>	Job finishes correctly, output contains the listing of the directory including the input file with correct size. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Cancel</b>	
<b>ID</b>	<b>JOBEXEC_CREAM_JOB_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with CREAM interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job cancellation for a job.	
<b>Input from TP</b>	
Test for the cancellation of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Job Submission and then cancellation. Possible description for job: Executable = "/bin/sleep"; Arguments = "20m";
<b>Expected Outcome</b>	Job is submitted and then cancelled correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 1.2 ARC Interface

These QC refer to implementation of the Compute capability using the ARC-CE interface [R 6]. May be deprecated in future versions of the QC.

<b>ARC-CE API TestSuite</b>	
<b>ID</b>	<b>JOBEXEC_ARC_API_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with ARC CE interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the all the functions of the ARC-CE interface.	
<b>Input from TP</b>	
Complete Test suite for the ARC-CE API. It must include tests for all the documented functions of the API. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all ARC-CE functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b>	
Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

### 1.2.1 Job Submission tests

The following job submission tests use the ARC xRSL format for the specification of jobs.

<b>Simple Job Submission</b>	
<b>ID</b>	<b>JOBEXEC_ARC_JOB_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with ARC CE interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job.	
<b>Input from TP</b>	
Test for the submission of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy.
<b>Test</b>	Job submission for simple job: <code>&amp;(executable="/bin/sleep")(arguments="120")</code>
<b>Expected Outcome</b>	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Simple Job Submission with files</b>	
<b>ID</b>	<b>JOBEXEC_ARC_JOB_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with ARC CE interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job with input and output files.	
<b>Input from TP</b>	
Test for the submission of a job with input and output files.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. Non-empty file "myfile"
<b>Test</b>	Job Submission of job with input and output files: & (executable="/bin/ls") (arguments="-l") (stdout="std.out ") (stderr="std.err ") (inputFiles=("myfile" ""))
<b>Expected Outcome</b>	Job finishes correctly, output contains the listing of the directory including the input file with correct size. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Cancel</b>	
<b>ID</b>	<b>JOBEXEC_ARC_JOB_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with ARC CE interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job cancellation for a job.	
<b>Input from TP</b>	
Test for the cancellation of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Job Submission and then cancellation. Possible job description for job: <code>&amp;(executable="/bin/sleep")(arguments="20m")</code>
<b>Expected Outcome</b>	Job is submitted and then cancelled correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

### 1.3 BES Interface

These QC refer to implementation of the Compute capability using the OGSA BES interface [R 7]. May be deprecated in future versions of the QC.

<b>BES API TestSuite</b>	
<b>ID</b>	<b>JOBEXEC_BES_API_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with BES interface
<b>Related Requirements</b>	None

<b>Description</b> Test the all the functions of the BES interface.	
<b>Input from TP</b> Complete Test suite for the BES API. It must include tests for all the mandatory documented functions of the specification. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all OGSA BES functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b> Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

### 1.3.1 Job Submission tests

The following job submission tests use the UNICORE UCC JSON format for the specification of jobs.

<b>Simple Job Submission</b>	
<b>ID</b>	<b>JOBEXEC_BES_JOB_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with BES interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job.	
<b>Input from TP</b>	
Test for the submission of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User credentials.
<b>Test</b>	Job Submission for simple job: <pre> {   Executable: "/bin/sleep",   Arguments: ["20"], } </pre>
<b>Expected Outcome</b>	Job finishes correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Simple Job Submission with files</b>	
<b>ID</b>	<b>JOBEXEC_BES_JOB_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with BES interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job with input and output files.	
<b>Input from TP</b>	
Test for the submission of a job with input and output files.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. Non-empty file "myfile"
<b>Test</b>	Job Submission of job with input/output files: <pre> {   Executable: "/bin/ls",   Arguments: ["-l"],   Stdout: std.out,   Stderr: std.err,   Imports: [     { From: "myfile", To: "myfile" },   ]   Exports: [     { From: "std.out", To: "std.out" },     { From: "std.err", To: "std.err" },   ] } </pre>
<b>Expected Outcome</b>	Job finishes correctly, output contains the listing of the directory including the input file with correct size. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Cancel</b>	
<b>ID</b>	<b>JOBEXEC_BES_JOB_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with BES interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job cancellation for a job.	
<b>Input from TP</b>	
Test for the cancellation of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Job Submission and then cancellation. Possible Job description for job: <pre> {   Executable: "/bin/sleep",   Arguments: ["20m"], } </pre>
<b>Expected Outcome</b>	Job is submitted and then cancelled correctly. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 1.4 DRMAA Interface

These QC refer to implementation of the Compute capability using the OGF DRMAA interface [R 8]. May be deprecated in future versions of the QC.

<b>DRMAA API TestSuite</b>	
<b>ID</b>	<b>JOBEXEC_DRMAA_API_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances with DRMAA interface
<b>Related Requirements</b>	None
<b>Description</b>	
Test the all the functions of the DRMAA interface.	
<b>Input from TP</b>	
Complete Test suite for the DRMAA API. It must include tests for all the mandatory documented functions of the specification. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all OGF DRMAA functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b>	
Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 1.5 Execution Manager Support

These QC refer to the interaction of the Job Execution Capability with the underlying execution manager (usually a LRMS) for the work items submitted. Job Execution Capabilities are expected to support the most common LRMS used in the current EGI infrastructure:

- Torque/PBS
- LSF
- SGE/OGE

<b>Not Invasive Deployment</b>	
<b>ID</b>	<b>JOBEXEC_EXECMNGR_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Execution Capability should not introduce any modifications to the underlying execution manager or to the operations of the resources.	
<b>Input from TP</b>	
Description of all the needed modifications on the local resources in order to deploy the Job Execution Capability implementation.	
<b>Pass/Fail Criteria</b>	
Pass if the modifications are not invasive, namely: <ul style="list-style-type: none"> <li>• Installation of additional software at the WN is permitted as long as no extra services are run permanently at the WN.</li> <li>• Do not require the deployment of extra shared filesystems</li> <li>• Do not modify the local submission mechanism of jobs (e.g. do not require the modification of prologue/epilogue scripts of the batch system)</li> <li>• Do not require the creation of extra user accounts or add special privileges to a specific account.</li> </ul>	
<b>Related Information</b>	
<b>History</b>	

<b>Job Submission</b>	
<b>ID</b>	<b>JOBEXEC_EXECMNGR_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Execution Capability must be able to submit, manage and monitor jobs to the underlying execution manager.	
<b>Input from TP</b>	
Test for job submission.	
<b>Test 1</b>	
<b>Pre-condition</b>	None
<b>Test</b>	Job submission to batch system
<b>Expected Outcome</b>	Job is submitted to batch system, a valid Job ID is returned.
<b>Test 2</b>	
<b>Pre-condition</b>	Already submitted job.
<b>Test</b>	Query job status in the execution manager.
<b>Expected Outcome</b>	Job status can be fetched, show a message with it.
<b>Test 3</b>	
<b>Pre-condition</b>	Already submitted job.
<b>Test</b>	Cancel job in the execution manager.
<b>Expected Outcome</b>	Job is successfully cancelled.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for each of the supported execution managers.	
<b>Related Information</b>	
<b>History</b>	

<b>Information Retrieval</b>	
<b>ID</b>	<b>JOBEXEC_EXECMNGR_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Execution Capability must be able to fetch information from the underlying execution manager and make it available to a Information Discovery Appliance.	
<b>Input from TP</b>	
Test for information retrieval from execution manager.	
<b>Test 1</b>	
<b>Pre-condition</b>	Configured system.
<b>Test</b>	Retrieve current status from execution manager.
<b>Expected Outcome</b>	All Computing Element related entities of GlueSchema using the <b>actual</b> information from the execution manager is generated.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 1.6 Availability/Scalability

<b>Stress Test</b>	
<b>ID</b>	JOBEXEC_AVAIL_1
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Execution Capability should be available under realistic conditions.	
<b>Input from TP</b>	
Stress test for the service that calculates the maximum throughput of the service.	
<b>Test 1</b>	
<b>Pre-condition</b>	Correctly configured service.
<b>Test</b>	Stress test the service until is not available.
<b>Expected Outcome</b>	Throughput of the service.
<b>Pass/Fail Criteria</b>	
Pass if the throughput is enough to handle at least 5000 simultaneous jobs.	
<b>Related Information</b>	
<b>History</b>	

<b>Service Redundancy</b>	
<b>ID</b>	<b>JOBEXEC_AVAIL_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
More than one Job Execution Capability implementation should be able to access a single local batch system concurrently.	
<b>Input from TP</b>	
Test for the concurrent access of more than one implementation to a single batch system.	
<b>Test 1</b>	
<b>Pre-condition</b>	More than one Compute Capability configured to use the same execution manager
<b>Test</b>	Submission of jobs to all the Compute Capabilities
<b>Expected Outcome</b>	All jobs are executed correctly; they are not mixed up in any situation.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Self-disabling Mechanism</b>	
<b>ID</b>	<b>JOBEXEC_AVAIL_3</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Job Execution Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Execution Capability should detect high load conditions and self-disable the job submission in order to maintain the quality of the service.	
<b>Input from TP</b>	
Stress test for the service that triggers a self-disabling mechanism.	
<b>Test 1</b>	
<b>Pre-condition</b>	Correctly configured service in high load system.
<b>Test</b>	Submission of job.
<b>Expected Outcome</b>	Service self-disables submission, a message to the client is sent when the submission is tried.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 2 PARALLEL JOB

### 2.1 Submission of parallel jobs

CREAM Simple Parallel Job Submission	
<b>ID</b>	PARALLEL_JOB_1
<b>Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances with CREAM interface.
<b>Related Requirements</b>	None
<b>Description</b> Test the submission of a parallel job.	
<b>Input from TP</b> Test for the submission of parallel jobs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of a job requesting more than one execution slot: Executable = "/bin/sleep"; CPUNumber = 2; Arguments = "20";
<b>Expected Outcome</b>	Job is submitted and the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b> Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>CREAM Fine grained Parallel Job Submission</b>	
<b>ID</b>	<b>PARALLEL_JOB_2</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances with CREAM interface.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parallel job with fine grained specification for the layout of processes.	
<b>Input from TP</b>	
Test for the submission of parallel jobs with fine grained specification for the layout of processes: use complete node, specify number of cores per node.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting a complete node: <code>Executable = "/bin/sleep";</code> <code>NodeNumber = 2;</code> <code>SMPGranularity = 2;</code> <code>Arguments = "20";</code>
<b>Expected Outcome</b>	Job is submitted and the requested slots were allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Test 2</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting a complete node: <code>Executable = "/bin/sleep";</code> <code>NodeNumber = 1;</code> <code>SMPGranularity = 4;</code> <code>WholeNode = True;</code> <code>Arguments = "20";</code>
<b>Expected Outcome</b>	Job is submitted and the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>ARC Simple Parallel Job Submission</b>	
<b>ID</b>	<b>PARALLEL_JOB_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances with ARC-CE interface.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parallel job.	
<b>Input from TP</b>	
Test for the submission of parallel jobs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting more than one execution slot: &(executable="/bin/sleep") (count="2") (arguments="20")
<b>Expected Outcome</b>	Job is submitted and the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>BES Simple Parallel Job Submission</b>	
<b>ID</b>	PARALLEL_JOB_4
<b>Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances with BES interface.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parallel job.	
<b>Input from TP</b>	
Test for the submission of parallel jobs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting more than one execution slot: <pre> {   Executable: "/bin/sleep",   Arguments: ["20"],   Resources: { CPUs: 2, }, } </pre>
<b>Expected Outcome</b>	Job is submitted and the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>BES Fine grained Parallel Job Submission</b>	
<b>ID</b>	<b>PARALLEL_JOB_5</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances with BES interface.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parallel job with fine grained specification for the layout of processes.	
<b>Input from TP</b>	
Test for the submission of parallel jobs with fine grained specification for the layout of processes: use complete node, specify number of cores per node.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting a complete node: <pre> {   Executable: "/bin/sleep",   Arguments: ["20"],   Resources:{     CPUsPerNode: 2,     Nodes: 2,   } } </pre>
<b>Expected Outcome</b>	Job is submitted and the requested slots were allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Test 2</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service.
<b>Test</b>	Submission of job requesting a particular process distribution: <pre> {   Executable: "/bin/sleep",   Arguments: ["20"],   Resources: { CPUsPerNode: 4, Nodes: 1 },   ExclusiveExecution: True, } </pre>
<b>Expected Outcome</b>	Job is submitted and the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

## 2.2 MPI support

<b>Precompiled MPI Job Submission</b>	
<b>ID</b>	<b>PARALLEL_MPI_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances.
<b>Related Requirements</b>	#672: MPI support
<b>Description</b>	
Test the submission of a precompiled MPI job.	
<b>Input from TP</b>	
Test for the submission of a MPI job that is already compiled.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. MPI Binary
<b>Test</b>	Submission of a MPI job requesting more than one execution slot with MPI Binary included in input sandbox of job (description of job depending on Job Execution interface)
<b>Expected Outcome</b>	Job is submitted and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for all the MPI implementations supported.	
<b>Related Information</b>	
<b>History</b>	

<b>MPI Job Submission with compilation</b>	
<b>ID</b>	<b>PARALLEL_MPI_2</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances.
<b>Related Requirements</b>	None

<b>Description</b>	
Test the submission of a MPI job that is compiled at the remote site.	
<b>Input from TP</b>	
Test for the submission of a MPI job that gets compiled at the remote site.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. Source code for MPI application.
<b>Test</b>	Submission of a MPI job requesting more than one execution slot with MPI source code included in input sandbox of job (description of job depending on Job Execution interface). Prior to the execution of the application, the source must be compiled with the available compiler at the site.
<b>Expected Outcome</b>	Job is submitted, compiled and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for all the MPI implementations supported.	
<b>Related Information</b>	
<b>History</b>	

### 2.3 OpenMP support

<b>Precompiled OpenMP Job Submission</b>	
<b>ID</b>	PARALLEL_OMP_1
<b>Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a precompiled OpenMP job.	
<b>Input from TP</b>	
Test for the submission of a OpenMP job that is already compiled.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. OpenMP Binary
<b>Test</b>	Submission of a OpenMP job requesting more than one execution slot with OpenMP Binary included in input sandbox of job (description of job depending on Job Execution interface)
<b>Expected Outcome</b>	Job is submitted and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for all the OpenMP implementations supported.	
<b>Related Information</b>	
<b>History</b>	

<b>OpenMP Job Submission with compilation</b>	
<b>ID</b>	<b>PARALLEL_OMP_2</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Parallel Job Appliances.
<b>Related Requirements</b>	None

<b>Description</b>	
Test the submission of an OpenMP job that is compiled at the remote site.	
<b>Input from TP</b>	
Test for the submission of an OpenMP job that gets compiled at the remote site.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid User proxy and valid delegation in the service. Source code for OpenMP application.
<b>Test</b>	Submission of an OpenMP job requesting more than one execution slot with OpenMP source code included in input sandbox of job (description of job depending on Job Execution interface). Prior to the execution of the application, the source must be compiled with the available compiler at the site.
<b>Expected Outcome</b>	Job is submitted, compiled and executed without errors; the requested slots are allocated. Unique Identifier for the submitted jobs, status log of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for all the OpenMP implementations supported.	
<b>Related Information</b>	
<b>History</b>	

### 3 JOB SCHEDULING

Compute Job Scheduling capability refers to the ‘end-to-end’ service that can be delivered to a user in response to their request for a job to be run. This includes managing the selection of the most appropriate resource that meets the user’s requirements, the transfer of any files required as input or produced as output between their source or destination storage location and the selected computational resource, and the management of any data transfer or execution failures within the infrastructure.

#### 3.1 Job Scheduling Interface

The Job Scheduling Capabilities does not have a standard interface. Any implementation of this capability can support on of the Job Execution interfaces proposed by the OGF (DRMAA, BES) or proprietary interfaces (gLite WMS)

<b>DRMAA API TestSuite</b>	
<b>ID</b>	<b>JOBSCH_DRMAA_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances implementing DRMAA interface.
<b>Related Requirements</b>	None

<b>Description</b>	
Test the all the functions of the DRMAA interface.	
<b>Input from TP</b>	
Complete Test suite for the DRMAA API. It must include tests for all the mandatory documented functions of the specification. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all OGF DRMAA functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b>	
Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>BES API TestSuite</b>	
<b>ID</b>	<b>JOBSCH_BES_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances implementing BES interface.
<b>Related Requirements</b>	None
<b>Description</b> Test the all the functions of the BES interface.	
<b>Input from TP</b> Complete Test suite for the BES API. It must include tests for all the mandatory documented functions of the specification. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all OGSA BES functionality, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b> Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

### 3.2 gLite WMS

<b>WMProxy API TestSuite</b>	
<b>ID</b>	<b>JOBSCH_WMS_API_1</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances implementing WMProxy interface.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the all the functions of the WMProxy interface.	
<b>Input from TP</b>	
Complete Test suite for the WMProxt API. It must include tests for all the documented functions in the WSDL. For all functions, check both correct and invalid input. Invalid output should throw an exception as documented. Test also with valid and invalid credentials. Invalid credentials should throw security related exceptions.	
<b>Test Suite Description</b>	
<b>Pre-condition</b>	Valid user credentials.
<b>Test</b>	Test all WMProxy documented functions, with correct/incorrect input and with valid and invalid credentials.
<b>Expected Outcome</b>	Log of all the operations performed. All the documented functions work as documented.
<b>Pass/Fail Criteria</b>	
Pass if the testsuite is provided and passes.	
<b>Related Information</b>	
WMProxy interface [R 9].	
<b>History</b>	

<b>JSDL Submission</b>	
<b>ID</b>	<b>JOBSCH_WMS_API_2</b>
<b>Non Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None

<b>Description</b>	
Job Scheduling services should allow submission of jobs described with JSDL language	
<b>Input from TP</b>	
Testsuite for submission of JSDL jobs covering different kinds of jobs and with several parameters, as much complete as possible. Test will check job submission and correct completion. A third party test can be provided to check it is JSDL compliant.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Submission of a provided JSDL compliant job, and follow the job until it reaches final state.
<b>Expected Outcome</b>	A complete job output submission, until reaching final state (success/failure)
<b>Pass/Fail Criteria</b>	
Will pass if every JSDL is analysed and completed. In case of JSDL syntax error, it must be reported as well. Will fail if a JSDL compliant job is not accepted by the job scheduling services, or if it does not behave as expected by the definition of the job	
<b>Related Information</b>	
<b>History</b>	

<b>Proxy Renewal</b>	
<b>ID</b>	JOBSCH_WMS_API_3
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	
<b>Description</b>	
The WMS must manage the user credentials and renew them if necessary.	
<b>Input from TP</b>	
Test of the proxy renewal functionality that checks what happens when the user credential expires and the job is still running.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials (short duration) and delegation in the service. Credentials Renewal service available.
<b>Test</b>	Submit job that takes longer to complete than the credential lifetime.
<b>Expected Outcome</b>	Job executes successfully. The scheduling services should perform a proxy renewal and state it in the log messages (if there is an error, log it also). Output of the job, and status messages stating the renewal or not of the user credentials.
<b>Pass/Fail Criteria</b>	
Will Pass if the proxy renewal is done, or if there is an error logged stating the problem. Will fail if there is no clear information about the process.	
<b>Related Information</b>	
<b>History</b>	

### 3.2.1 End-to-end job tests

<b>Simple Job Submission</b>	
<b>ID</b>	JOBSCH_WMS_JOB_1
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job.	
<b>Input from TP</b>	
Test for the submission of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission for simple job: Executable = /bin/sleep; Arguments = "120";
<b>Expected Outcome</b>	Job is submitted and finishes its execution correctly, all states of the job must be logged correctly.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Simple Job Submission with files</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_2</b>
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job submission for simple job with input and output files.	
<b>Input from TP</b>	
Test for the submission of a job with input and output files.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service. Non-empty file "myfile"
<b>Test</b>	Job submission for simple job with input and output files: <pre>Executable = "/bin/ls"; Arguments = "-l"; StdOutput = "std.out"; StdError = "std.err"; InputSandbox = {"myfile"}; OutputSandbox = {"std.out", "std.err"};</pre>
<b>Expected Outcome</b>	Job is submitted and finishes its execution correctly and the output of the job contains the listing of the directory including the input file with correct size, all states of the job must be logged correctly.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Cancel</b>	
<b>ID</b>	JOBSCH_WMS_JOB_3
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the job cancellation for a job.	
<b>Input from TP</b>	
Test for the cancellation of a job.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission and then cancellation for simple job: <pre>Executable = "/bin/sleep"; Arguments = "20m";</pre>
<b>Expected Outcome</b>	Job is submitted and cancelled correctly at the Computing Capability.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Parallel Job Submission</b>	
<b>ID</b>	JOBSCH_WMS_JOB_4
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parallel job.	
<b>Input from TP</b>	
Test for the submission of parallel jobs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission for simple job: <pre>Executable = "/bin/sleep"; CPUNumber = 2; Arguments = "20";</pre>
<b>Expected Outcome</b>	Job is submitted and executed correctly. The requested slots where allocated.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job List Match and Rank</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_5</b>
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the list match for jobs.	
<b>Input from TP</b>	
Test for the list match functionality.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job list match for job with requirements and rank expressions, for example: <code>Executable = "/bin/sleep";</code> <code>Requirements = other.GlueCEStateStatus = "Production";</code> <code>Rank = -other.GlueCEStateEstimatedResponseTime;</code>
<b>Expected Outcome</b>	List of resources with correct rank is returned.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Parametric Job Submission</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_6</b>
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a parametric job.	
<b>Input from TP</b>	
Test for the submission of parametric jobs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission of job with numeric parameters (Parameters = 10000;ParameterStart = 1000; ParameterStep = 10;).
<b>Expected Outcome</b>	Job is executed correctly. List of JobIds for the parametric jobs and each of the subjobs is obtained; all states of the jobs must be logged correctly.
<b>Test 2</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission of job with a list of parameters (Parameters={A, B, C,...}).
<b>Expected Outcome</b>	Job is executed correctly. List of JobIds for the parametric jobs and each of the subjobs is obtained; all states of the jobs must be logged correctly.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Collection Submission</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_7</b>
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
Test the submission of a job collection.	
<b>Input from TP</b>	
Test for the submission of job collections.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission for job collection.
<b>Expected Outcome</b>	Job is executed correctly. List of JobIds for the job collections and each of the subjobs is obtained; all states of the jobs must be logged correctly.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>DAG Submission</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_8</b>
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b> Test the submission of a DAG.	
<b>Input from TP</b> Test for the submission DAGs.	
<b>Test 1</b> <b>Pre-condition</b> Valid user credentials and delegation in the service. <b>Test</b> Job submission for DAG. <b>Expected Outcome</b> Job is executed correctly. List of JobIds for DAG and each of the subjobs is obtained; all states of the jobs must be logged correctly.	
<b>Pass/Fail Criteria</b> Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Job Resubmission</b>	
<b>ID</b>	JOBSCH_WMS_JOB_9
<b>Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	Requirements gathered in MS305 related to resubmission of jobs, and information provided in error messages.
<b>Description</b>	
Job failures due to resource malfunctioning and not to the job itself must be resubmitted to other resources, with a configurable amount of repetitions. In the case of job failures due to the job itself must be resubmitted with a configurable amount of repetitions. In botch situations, status must reflect clearly what is the cause of resubmission, new resource selected and attempt number	
<b>Input from TP</b>	
Test and for checking resubmission mechanisms	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission that fails due to simulated remote resource malfunctioning.
<b>Expected Outcome</b>	Job is resubmitted to other resource. Log of all failures and a complete trace of the job.
<b>Test 2</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Job submission for job that always fails (e.g. exit code 1)
<b>Expected Outcome</b>	Job is resubmitted until resubmission attempts reach the configured limit. Log of all failures and a complete trace of the job.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and produces a complete trace of the job failures due to remote causes or the job itself	
<b>Related Information</b>	
<b>History</b>	

<b>JDL Acceptance limits</b>	
<b>ID</b>	<b>JOBSCH_WMS_JOB_10</b>
<b>Non Mandatory</b>	
<b>Applicability</b>	gLite WMS Job Scheduling Appliances.
<b>Related Requirements</b>	
<b>Description</b>	
The service should accept JDLs without size restrictions.	
<b>Input from TP</b>	
A test to submit a job and check if it is accepted or rejected, specially for big JDLs.	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials and delegation in the service.
<b>Test</b>	Submission of job descriptions (specially large)
<b>Expected Outcome</b>	Normal job submission if everything is correct; an error message if any problem arises.
<b>Pass/Fail Criteria</b>	
Will Pass if JDL is correct, and submits the job or if there is a report on a known syntax error in the jdl. Will Fail if a wrong Jdl is accepted or if it crashes	
<b>Related Information</b>	
<b>History</b>	

### 3.3 Job Execution Capability Support

These QC refer to the interaction of the Job Scheduling Capability with the underlying Job Execution Capability implementations for the work items submitted. Job Scheduling Capabilities are expected to support the most common Job Execution Capability Implementations used in the current EGI infrastructure: CREAM, ARC and UNICORE

<b>Job Submission</b>	
<b>ID</b>	JOBSCH_EXEC_1
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances.
<b>Related Requirements</b>	None
<b>Description</b>	
The Job Scheduling Capability must be able to submit, manage and monitor jobs to the underlying Job Execution Capability.	
<b>Input from TP</b>	
Test for job submission.	
<b>Test 1</b>	
<b>Pre-condition</b>	None
<b>Test</b>	Job submission to Job Execution Capability
<b>Expected Outcome</b>	Job is submitted to Job Execution Capability, a valid Job ID is returned.
<b>Test 2</b>	
<b>Pre-condition</b>	Already submitted job.
<b>Test</b>	Query job status in the Job Execution Capability.
<b>Expected Outcome</b>	Job status can be fetched, show a message with it.
<b>Test 3</b>	
<b>Pre-condition</b>	Already submitted job.
<b>Test</b>	Cancel job in the Job Execution Capability.
<b>Expected Outcome</b>	Job is successfully cancelled.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes for each of the supported Job Execution capability Implementations.	
<b>Related Information</b>	
Job Execution Capability Criteria (see Section 1 of this document)	
<b>History</b>	

### 3.4 Service availability, monitoring and error handling.

<b>Service ping</b>	
<b>ID</b>	JOBSCH_SERVICE_1
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances.
<b>Related Requirements</b>	

<b>Description</b>	
Check if all implied services respond to a ping.	
<b>Input from TP</b>	
A test to check all required services are running from a remote machine. This is not a script to check daemons are running, but the services are reachable from a remote machine (usually a User Interface)	
<b>Test 1</b>	
<b>Pre-condition</b>	Valid user credentials, information discovery service available.
<b>Test</b>	Contact remote machine providing job scheduling and perform a ping test.
<b>Expected Outcome</b>	Name of remote service and its reachable status (Ok /Fail)
<b>Pass/Fail Criteria</b>	
Test will effectively contact remote services, and provide their status.	
<b>Related Information</b>	
<b>History</b>	

<b>Error Messages</b>	
<b>ID</b>	<b>JOBSCH_SERVICE_2</b>
<b>Non Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances. Applicable for every service, and specially for the command line interface
<b>Related Requirements</b>	#705: WMS and error handling enhancements
<b>Description</b>	
The error messages provided by the service should be clear and facilitate the solution of those errors.	
<b>Input from TP</b>	
For every service a list of possible errors that can appear must be provided. In case of command line interface, this list has to be exhaustive to all the messages that a user can obtain from its usage. The list of messages have to contain the following fields:	
<ul style="list-style-type: none"> <li>- Error code (if applicable)</li> <li>- Error message</li> <li>- Error source (internal module or remote resource (specify it explicitly))</li> <li>- Cause of error (syntax error, module malfunctioning, configuration problem, network error, other (specify it explicit))</li> <li>- Type (critical, informative)</li> </ul>	
<b>Pass/Fail Criteria</b>	
A complete list of errors per service is provided	
<b>Related Information</b>	
<b>History</b>	

<b>Service Information</b>	
<b>ID</b>	<b>JOBSCH_SERVICE_3</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances.
<b>Related Requirements</b>	
<b>Description</b>	
Job Scheduling services should publish information about themselves.	
<b>Input from TP</b>	
Test for information generation about the service status.	
<b>Test 1</b>	
<b>Pre-condition</b>	Configured system, Information Discovery Capability available.
<b>Test</b>	Generate service information and publish to Information Discovery Capability
<b>Expected Outcome</b>	Information is produced and can be accessed through the Information Discovery Capability.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>	

<b>Stress Test</b>	
<b>ID</b>	<b>JOBSCH_SERVICE_4</b>
<b>Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances.
<b>Related Requirements</b>	#698: WMS stability and performance #702: Stability of UMD services and improvements
<b>Description</b>	
The Job Scheduling Capability should be available under realistic conditions.	
<b>Input from TP</b>	
Stress test for the service that calculates the maximum throughput of the service.	
<b>Test 1</b>	
<b>Pre-condition</b>	Correctly configured service.
<b>Test</b>	Stress test the service until is not available.
<b>Expected Outcome</b>	Maximum throughput of the service.
<b>Pass/Fail Criteria</b>	
Pass if the maximum throughput is enough for realistic use of the service. The service should support at least 1000 simultaneous jobs.	
<b>Related Information</b>	
<b>History</b>	

<b>Self-disabling Mechanism</b>	
<b>ID</b>	<b>JOBSCH_SERVICE_5</b>
<b>Not Mandatory</b>	
<b>Applicability</b>	Job Scheduling Appliances.
<b>Related Requirements</b>	#698: WMS stability and performance #702: Stability of UMD services and improvements
<b>Description</b>	
The Job Scheduling Capability should detect high load conditions and self-disable the job submission in order to maintain the quality of the service.	
<b>Input from TP</b>	
Stress test for the service that triggers a self-disabling mechanism.	
<b>Test 1</b>	
<b>Pre-condition</b>	Correctly configured service in high load system.
<b>Test</b>	Submission of job.
<b>Expected Outcome</b>	Service self-disables submission, a message to the client is sent when the submission is tried.
<b>Pass/Fail Criteria</b>	
Pass if the test is provided and passes.	
<b>Related Information</b>	
<b>History</b>
