Neuroinformatics Platform

Provide technical capabilities to **federate** neuroscience data, **analyze** structural and functional brain data and to **build and navigate multi-level brain atlases**. This involves:

- spatial and temporal data registration
- ontology development and semantic annotation
- predictive neuroscience
- machine learning, data mining
- track provenance, build workflows.

Goal: enable an integrated view of the neuroscience data. Prepare data for modeling pipelines

Builds on standards and infrastructure of International Neuroinformatics Coordinating Facility (INCF)

**Biological or In silico
Data**

Access & Use

HBP Core Data Model

- Built on **W3C PROV-O**
- Represents in vivo, in vitro and in silico **entities**
- Represents **observations**
- Describes properties using **ontologies**
- Records **where** an entity or observation is located
- Tracks **how** data is produced
- Tracks **who** performed experiments/manipulations

morphology - single cell [C120501A1 reconstruction]

Contributors: Maria Toledo (processing of biological sample, acquisition of cell morphological data), Julie Meystre (processing of biological sample)

Specimen: [Rattus norvegicus](#), Han wistar, Male, post natal day 14

Brain Location: [Somatosensory cortex hindlimb layer II/III](#)

Methods: [Morphological Reconstruction of a Single Cell Slice Staining for Morphological Cell Reconstruction](#)

full brain - [golgi images sagittal]

Contributors: [Hui Gong](#) (acquisition of microscopy data, extraction of tissue)

Specimen: [Rattus norvegicus](#), Sprague Dawley, Male, post natal day 70

Brain Location: [Brain](#)

Methods: [HUST - Tissue Extraction, Fixing and Staining](#) [HUST - Image Capture](#)

BigBrain(s): cellular architecture

In the HBP Collaboratory

Amunts et al. *Science*, 340(6139): 1472-1475, 2013
Amunts et al., in *Brain Inspired Computing*, Grandinetti, Lippert, Petkov, (Ed.), 2014, *Lecture Notes in Computer Science* 8603: 3-14, Springer.

BigBrain(s): fiber architecture

3D-PLI

Polarized Light Imaging as a tool to analyze the fibres at microscopical resolution in 3D

N: 1.500 – 3.000 per brain
Thickness: 100 – 50 μm
Resolution: 1.3 μm in-plane

The MNI space as a common template for different data modalities

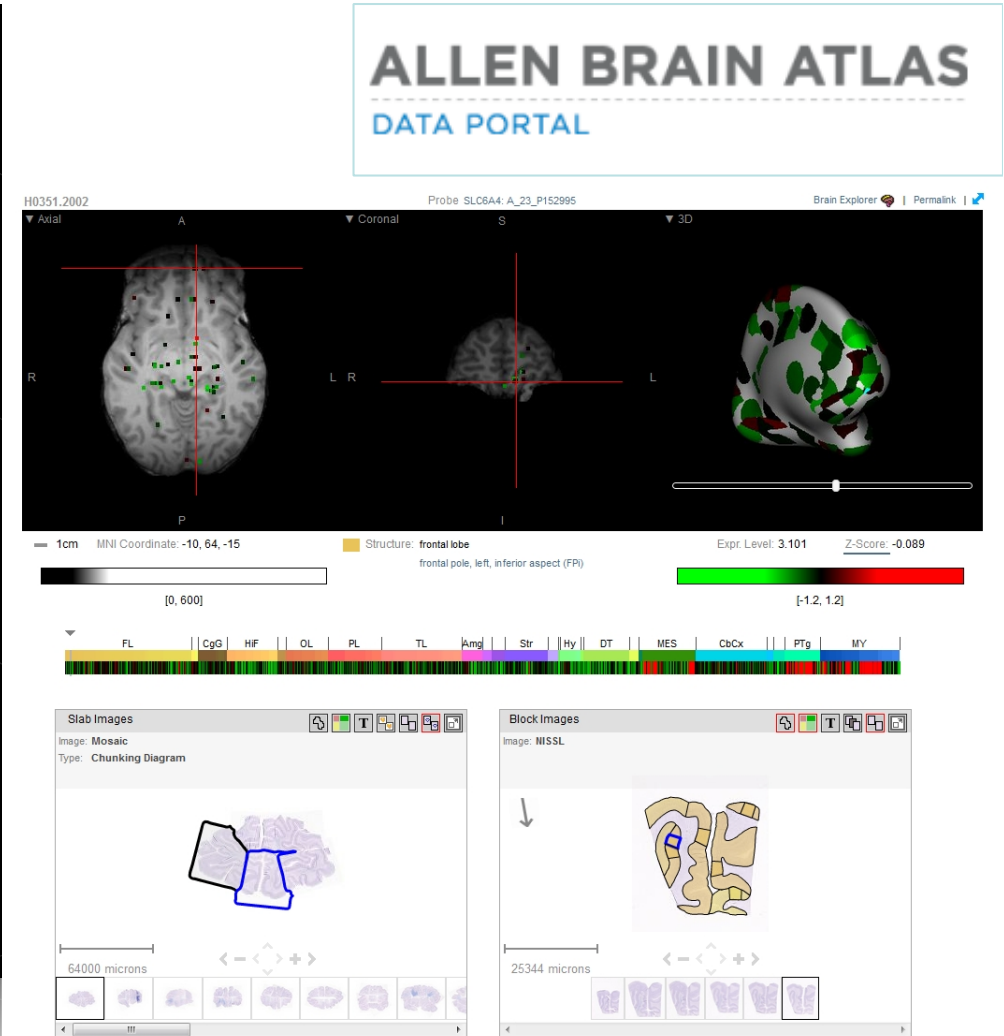

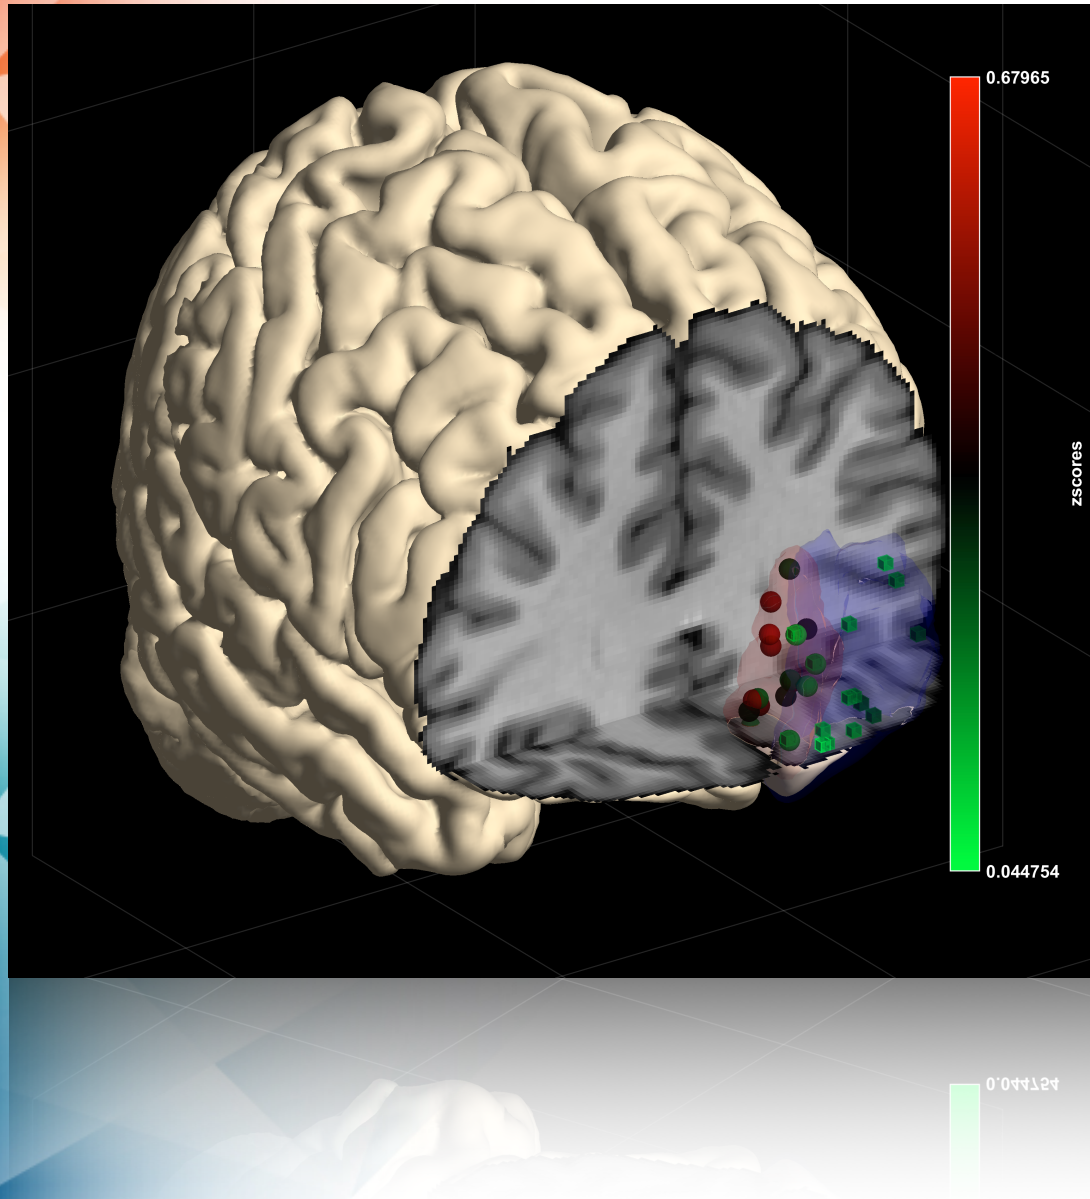

JuBrain atlas for
interpreting fMRI data
on visuo-motor
coordination

80.5% in left Area PF (IPL) (11.7% activated)
14.9% in left Area PFt (IPL) (1.7% activated)
3.5% in left Area hIP2 (IPS) (1.0% activated)

The International Initiative for Traumatic Brain Injury Research (InTBIR)

Working together to improve outcomes and lessen the global burden of traumatic brain injury by 2020

InTBIR is a collaborative effort of the European Commission (EC), the Canadian Institutes of Health Research (CIHR) and the National Institutes of Health (NIH). It was set up in October 2011 to advance clinical traumatic brain injury (TBI) research, treatment and care.

International collaboration on traumatic brain injury

Open Data Challenges

- Not black and white:
 - Not just OPEN or CLOSED
 - Need granularity to be explicit about what is open, when and for what purpose
 - Then gradually develop the culture of loosening these restrictions

Open Data Challenges

- Willing to share data but:
 - Expensive to produce (intellectual capital - experimental design, acquisition cost, time)
 - Many possible uses (multiple research questions) for large data sets
 - Currently, reward currencies are intellectual advances, publications and citations
 - No clear reward or motivation for providing data completely free of any constraint

Data use agreements

- Data use agreement
 - Sets conditions for data use
 - Don't abuse privileges (e.g. deidentify human data)
 - Don't redistribute, go to approved repository for registered access (maintain data integrity, tracking accesses)
 - Agree to acceptable use policies (e.g. investigate non-embargoed questions only)
 - Embargo duration
 - Share and share-alike - if data combined with others that should be shared, result should be shared
 - Commercial use?
 - Stakeholders
 - Points to research registry for dataset
 - Owners can reserve (embargo) data access for specific research questions for limited time period
 - Others may access for non-embargoed use

Open Data - tiered access

- Tier 0 - Unrestricted
 - All metadata and/or data freely available (includes contributor, specimen details, methods/protocols, data type, access URL)
 - **Reward: Potential citation, collaboration**
- Tier 1 - Restricted use
 - Data available for restricted use, developing analysis algorithms
 - **Reward: Data citation**
- Tier 2 - Restricted Use
 - Data available for restricted use, nonconflicting research questions
 - **Reward: Co-authorship**
- Tier 3 - Restricted use
 - Full data available for collaborative investigation, joint research questions
 - **Reward: Collaboration, co-authorship**
