The present Operational Level Agreement (“the Agreement”) is made between **EGI.eu (the Customer)** and **SURFsara (the Provider)** to define the provision and support of the provided services as described hereafter. Representatives and contact information are defined in Section 6.

The main objective of MoBrain is to lower barriers for scientists to access modern e-Science solutions from micro to macro scales. By building on grid- and cloud-based infrastructures and on the existing expertise available within WeNMR<sup>1</sup> and N4U<sup>2</sup> and by integrating molecular structural biology and medical imaging services and data, MoBrain will kick-start the development of a larger, integrated, global science virtual research environment for life and brain scientists worldwide. The projects defined in MoBrain are geared toward facilitating this overall objective, each with specific objectives to reinforce existing services, develop new solutions and pave the path to global competence centre and virtual research environment for transnational research from molecular to brain.

The User is a consortium represented by the **the Faculty of Science – Chemistry, Utrecht University**.

This Agreement is valid from **01/01/2016** to **01/01/2017**.

The Agreement was discussed and approved by the Customer and the Provider on **1.03.2016**.

The Agreement extends the Resource Center OLA<sup>3</sup> with following information:

## 1 The Services

The Services is enabled and provided to the User through Virtual Organization: vo:enmr.eu

The Services are defined by the following properties:

### **High-Throughput Compute (category: Compute) and File Storage (category: Storage)**

A High-Throughput Compute allows running computational tasks on high quality IT resources, accessible via a uniform/standard interface and supporting authentication/authorisation based on a membership within a virtual organisation. HTC Compute service is federated from EGI Federation providers offering seamless access to computing capabilities with integrated monitoring and accounting.

File storage is provided remotely on different Resource Providers with different storage standard interfaces that are transparently available with the possibility of replication.

- High-Throughput Compute
  - Opportunistic computing time [HEPSPEC-hours]: 20 Millions
