The present Operation Level Agreement (“the Agreement”) is made between **EGI.eu (the Service Provider)** and **INFN-CATANIA-STACK (the Component Provider)** to define the provision and support of the provided services as described hereafter. Representatives and contact information are defined in Section 6.

The EXTraS project (Exploring the X-ray Transient and variable Sky¹) is harvesting the hitherto unexplored temporal domain information buried in the serendipitous data collected by the European Photon Imaging Camera (EPIC) instrument on board the ESA XMM-Newton, in 13 years of observations. The main result will be a public catalogue that will become the reference for time domain astrophysics in the soft X-ray band, until a future, dedicated mission is deployed. The project plans to perform part of this analysis by exploiting Cloud resources through a dedicated science gateway. This will allow extending the analysis to recent EPIC data, not included in the public catalogue that will be released at the end of 2016, and will also allow users from the community to analyse their own data using EXTraS pipelines. Moreover, population studies of transient and variable sources can be performed only when the systematic analysis of the full data sample and its screening and validation is concluded, i.e. after the end of the EXTraS project.

The User is a consortium represented by the **INAF-IASF**.

This Agreement is valid from **01/06/2017** to **01/06/2022**.

Once approved, **this Agreement is automatically renewed**, as long as the Provider does not express a decision to terminate the Agreement at least a month before the end date of the Agreement.

The Agreement was discussed and approved by the EGI foundation and the Component Provider on **30/11/2015**.

The Agreement extends the Resource Center OLA² with following information:
