The present Service Level Agreement ("the Agreement") is made between **EGI Foundation (the Service provider)** and **D4Science Infrastructure (the Customer)** to define the provision and support of the provided services as described hereafter. Representatives and contact information are defined in Section 6.

The communities addressed by the D4Science Infrastructure are the ones served by a number of initiatives and projects powered by it such as iMarine, SoBigData, BlueBRIDGE, Parthenos, EGIP, Descramble and others. They are interested in performing data analysis on biological, social, geothermal, satellite, and environmental data. To this aim, D4Science uses two types of services that have been properly packaged and made available as Virtual Appliances.

The first service is composed of a distributed set of web services embedding computational processes for discovering patterns in large data sets involving methods at the intersection of artificial intelligence, machine learning, and statistics (DataMiner Worker).

The second service exploits a set of "lightweight" workers (Generic Worker) that are used for computations, in which one computation is divided into several parts that are low-resources demanding. Generic Workers employ one core for service operations and another one for processes executions. Applications include for example the combination of geographical and biological information to produce projections of environmental scenarios, assessing fisheries activities in the global oceans, predicting the impact of climate changes on biodiversity, preventing the spread of invasive species, identifying geographical and ecological aspects of disease transmission, helping in conservation planning, and guiding field surveys.

The Customer is a consortium represented by the **CNR Istituto di Scienza e Tecnologie dell' Informazione A. Faedo**.

This Agreement is valid from **01/09/2016** to **31/12/2020**.

The Agreement was discussed and approved by the Customer and the Provider on **07/12/2016**.
