The present Operational Level Agreement (“the Agreement”) is made between **EGI Foundation (the Service Provider)** and **CETA-GRID (the Component Provider)** to define the provision and support of the provided services as described hereafter. Representatives and contact information are defined in Section 6.

The LAGO (Latin American Giant Observatory) project is an extended Astroparticle Observatory at global scale. It is mainly oriented to basic research on three branches of astroparticle physics: the extreme universe, space weather phenomena, and atmospheric radiation at ground level. The LAGO detection network consists in single or small arrays of particle detectors at ground level, spanning over different sites located at significantly different latitudes (currently from Mexico up to the Antarctic region) and different altitudes (from sea level up to more than 5000 meters over sea level), covering a huge range of geomagnetic rigidity cut-offs and atmospheric absorption/reaction levels. The LAGO Project is operated by the LAGO Collaboration, a non-centralized and distributed collaborative network of more than 100 scientists from more than 30 institutions in 11 countries. Finally, detectors installed in various universities are used as a tool to teach students about particle and astroparticle physics, in particular by leading them to the measurement of the muon decay.

The Customer is a consortium represented by the **EOSC-Synergy**

This Agreement is valid from **01/05/2021** to **31/10/2022**.

Once approved, **this Agreement is automatically renewed**, as long as the Component Provider does not express a decision to terminate the Agreement at least a month before the end date of the Agreement.

The Agreement was discussed and approved by the EGI Foundation and the Component Provider **05/05/2021**.

The Agreement extends the Resource Center OLA¹ with the following information:
