# Landscape of policies, funding and interoperability framework for international science

19 October 2022

# In the next 15 minutes I'd like to introduce you:

- \* Science in transition - Open Science
- \* European priorities and EOSC
- \* Open Science Policies
- \* Funding models
- \* Interoperability framework
- \* Global initiatives

neosc

# Science in Transition

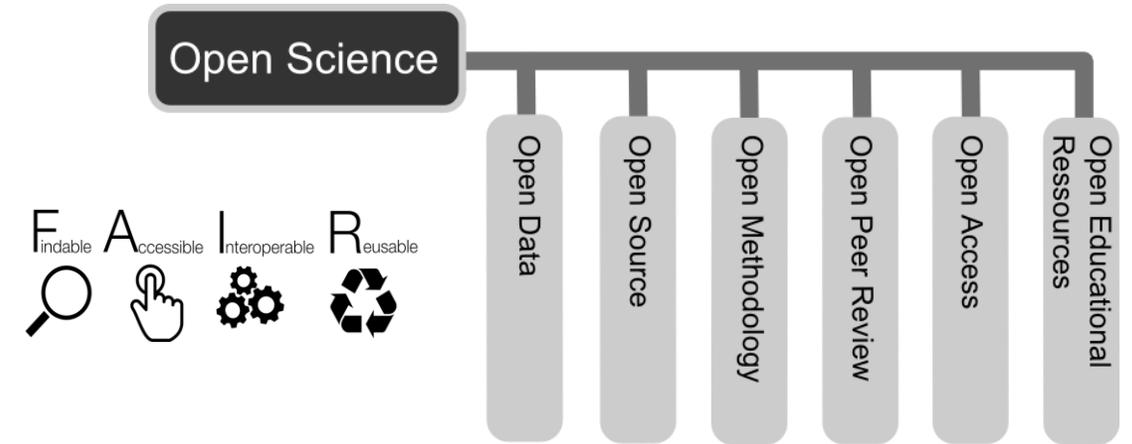

The **Open Science** paradigm affects the whole research cycle and all its stakeholders

It implies sharing knowledge and tools:

- “as early as possible” in the research process;
- “as openly as possible”;
- “as FAIR as possible”;

not only within a discipline but also between disciplines and society at large.

[https://commons.wikimedia.org/wiki/File:Open\\_Science\\_-\\_Prinzipien.png](https://commons.wikimedia.org/wiki/File:Open_Science_-_Prinzipien.png)

- Developing an enabling policy environment for open science
- Investing in open science infrastructures and services
- Investing in human resources, training, education, digital literacy and capacity building for open science
- Provide incentives

# European Priorities

# Open Science: a Political Priority of the Union

- 2016: Council Conclusions on the ‘Transition Towards an Open Science System’
- 2018: EC Recommendation on ‘Access to and Preservation of Scientific Information’
- 2020: EC Communication on the ‘New ERA’
- 2021: Council Recommendation on a ‘Pact for R&I in Europe’
- 2021: Council Conclusions on the ‘Future Governance of the ERA’ including the ‘ERA Policy Agenda’
- 2022: Council Conclusions on ‘Research Assessment’

## Member States' Commitment to 20 ERA Actions

Status: 13/07/2022

Priority area: 1 Open Science including EOSC  
 4 Research careers  
 8 Research Infrastructures

# What is EOSC?

- ❖ Virtual space where science producers and consumers come together
- ❖ Environment in which data can be brought together with services to perform analyses and address societal challenges

## ***A Web of scientific insight***

- ❖ Web of FAIR Data and related Services
- ❖ Federation of relevant existing and future data sources
- ❖ Federation of e-Infra and Research Infrastructures

# eosc EOSC implementation: a two-stage approach

**EOSC phase 1: preparatory**

**2018 - 2020**

**H2020 calls/grants approach**

**EOSC roadmap 2018-2020**  
by the European Commission

**Initial EOSC Governance**  
(Member States and the  
Commission to steer and oversee  
initial EOSC development)

**EOSC phase 2: continuous EOSC roll-out**

**2021 - 2030**

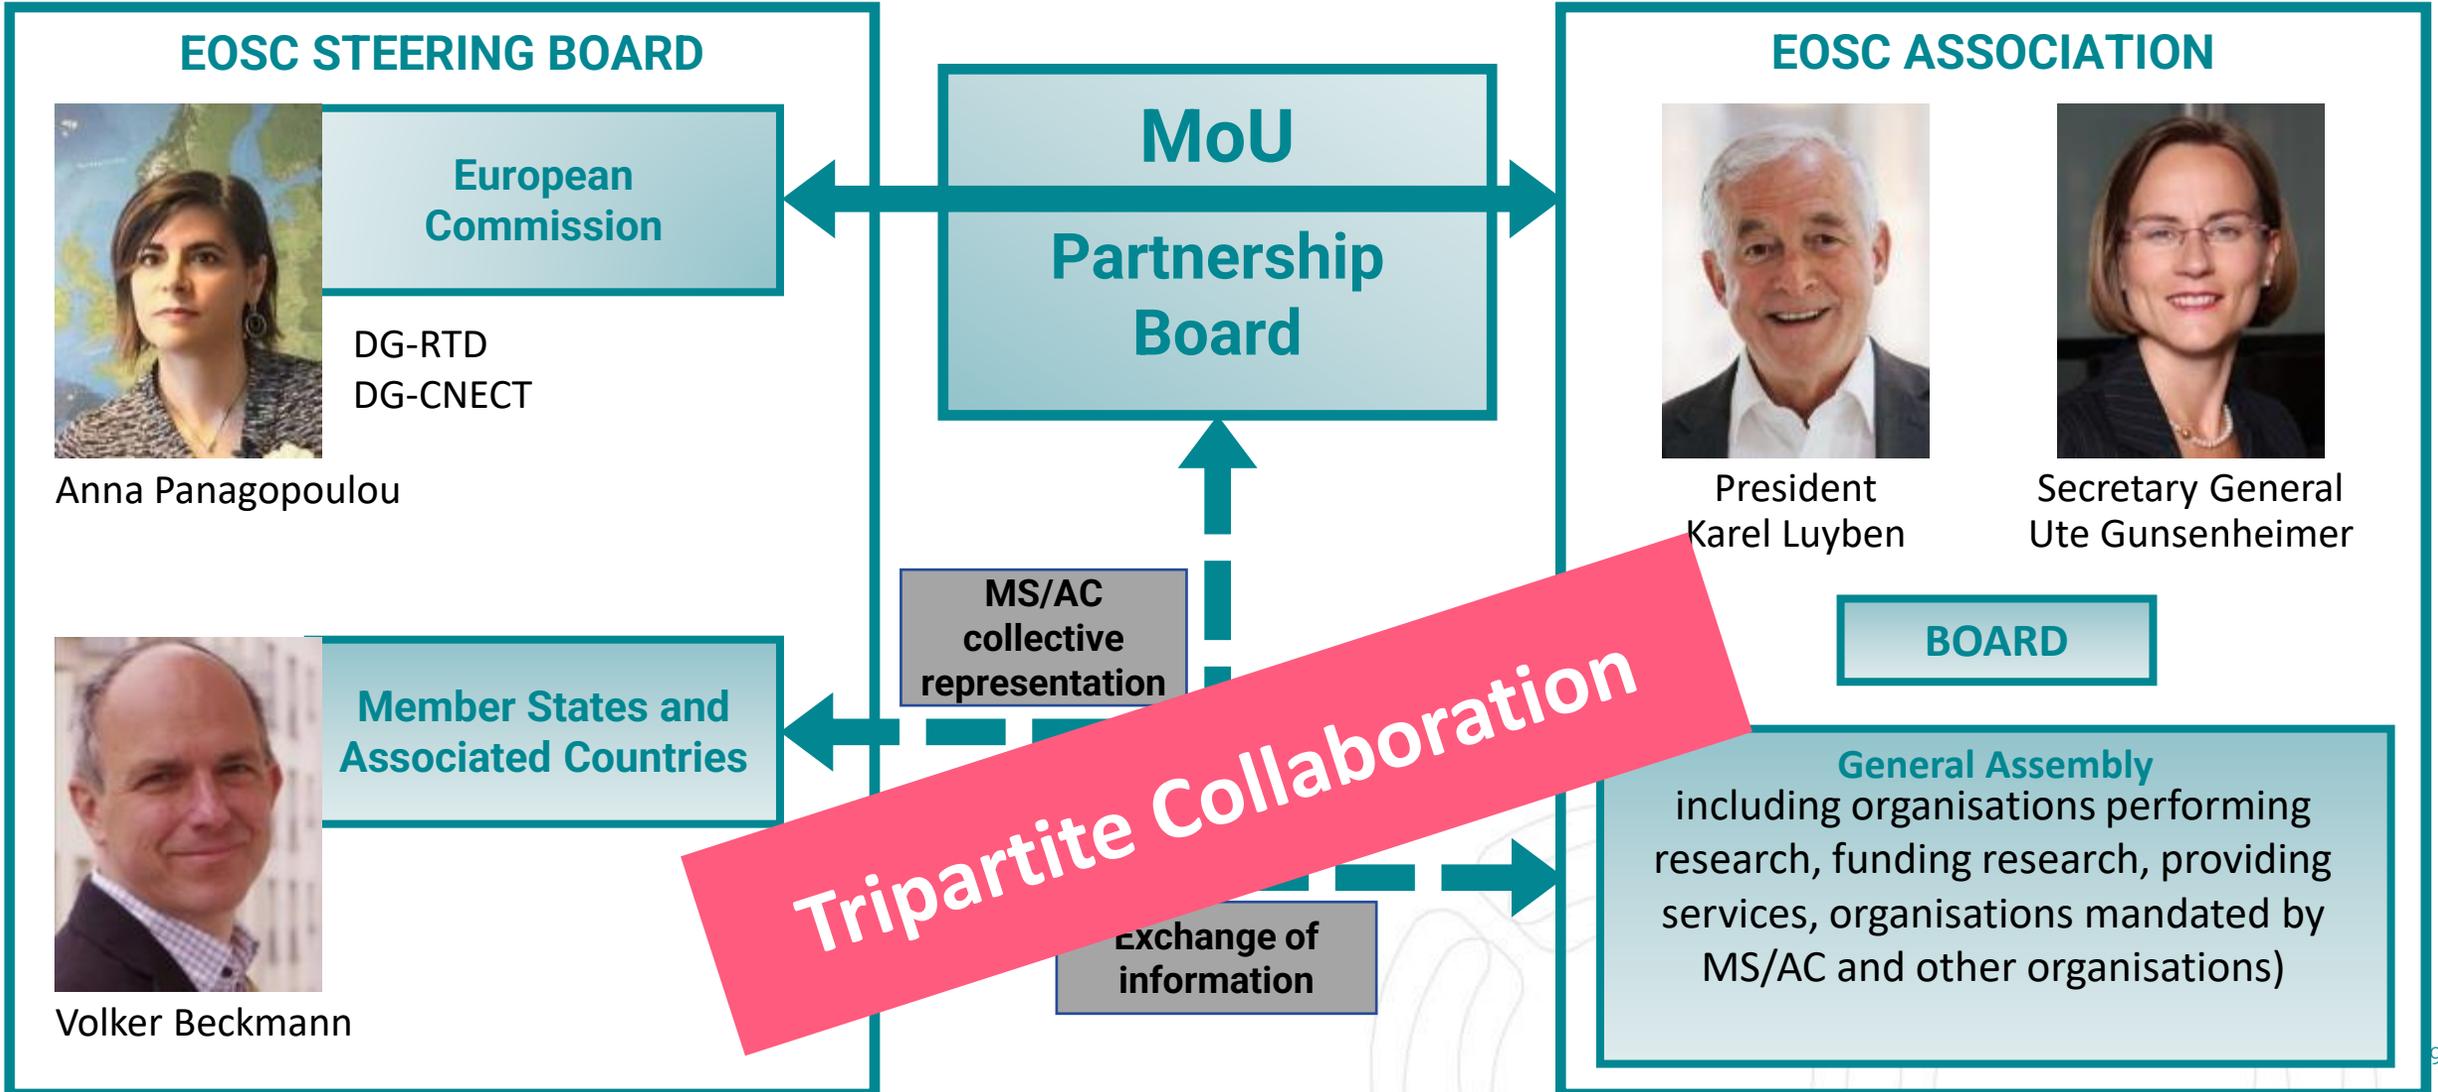

**Partnership approach in Horizon Europe**

**EOSC Strategic Research and Innovation Agenda (EOSC SRIA)**  
2021-2027 by the EOSC Community

**New EOSC Governance**  
(Increasingly stakeholder-driven, high-level steering role  
maintained for the European Commission and the Member States)

Activities to deliver the EOSC as a trusted virtual environment supporting Open Science and data and service-driven research is co-designed with MS/ACs and stakeholders in the framework of the **EOSC European partnership**.

# EOSC Partnership

The partnership formed by the EC and the EOSC Association envisages 1 billion euro to roll-out EOSC during phase 2

# eosc The EOSC Association Today

27 Mandated Organisation - 133 Members - 78 Observers

# eosc EOSC-A Brain-Pool: 13 Task Forces

Over 400 volunteers

## Implementation of EOSC

- Rules of Participation compliance monitoring
- PID policy and implementation
- Researcher engagement and adoption

## Technical challenges on EOSC

- Technical interoperability of data and services
- Infrastructure for quality research software
- AAI Architecture

## Metadata and data quality

- Semantic interoperability
- FAIR metrics and data quality

## Research careers and curricula

- Data stewardship curricula and career paths
- Research careers, recognition and credit
- Upskilling countries to engage in EOSC

## Sustaining EOSC

- Financial sustainability
- Long-term data preservation

oeosc

# Open Science Policies

# Open Science strategy

Key to ensure EOSC sustainability

- Open Science policies and governance
- Services and infrastructures
- Skills and training
- Incentives and recognition
- Alignment with global projects and initiatives

find more at <https://zenodo.org/record/4486610#.YIPwkshBW2W>

Filipa Pereira: *Open Science Strategy Landscapes*

## Status of national Open Science

- different Member States progressing at different paces on policy on **Open Access to public sector information**
- **Recognition** related to data sharing

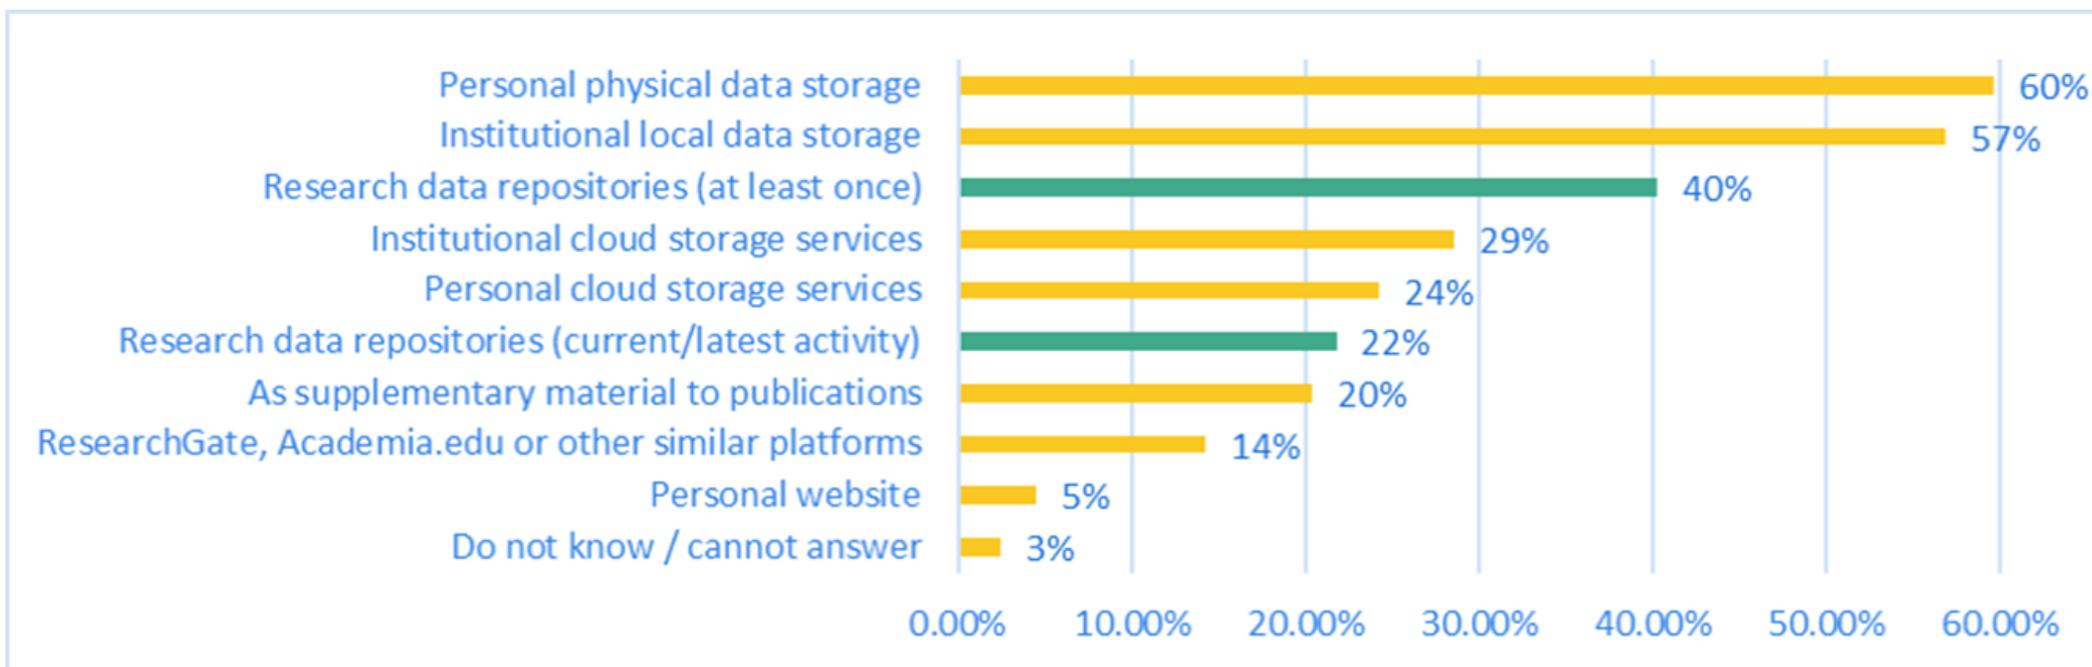

## Status of implementation of FAIR principles:

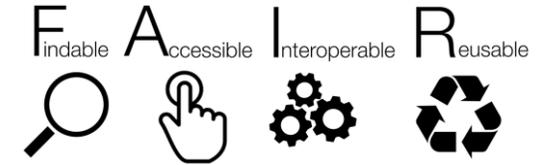

National service for data management plans, submission of DMP and deposit of data in trustworthy data repositories as a requirement,

# Research data depositing

- **Research data repositories are not the most common destination for storing usable research data.**
- Researchers usually (~60%) stored data in **personal** physical data storage or institutional **local** data storage.
- **40%** of researchers occasionally stored data in **research data repositories**. 22% respondents did that during the current/latest research activity.

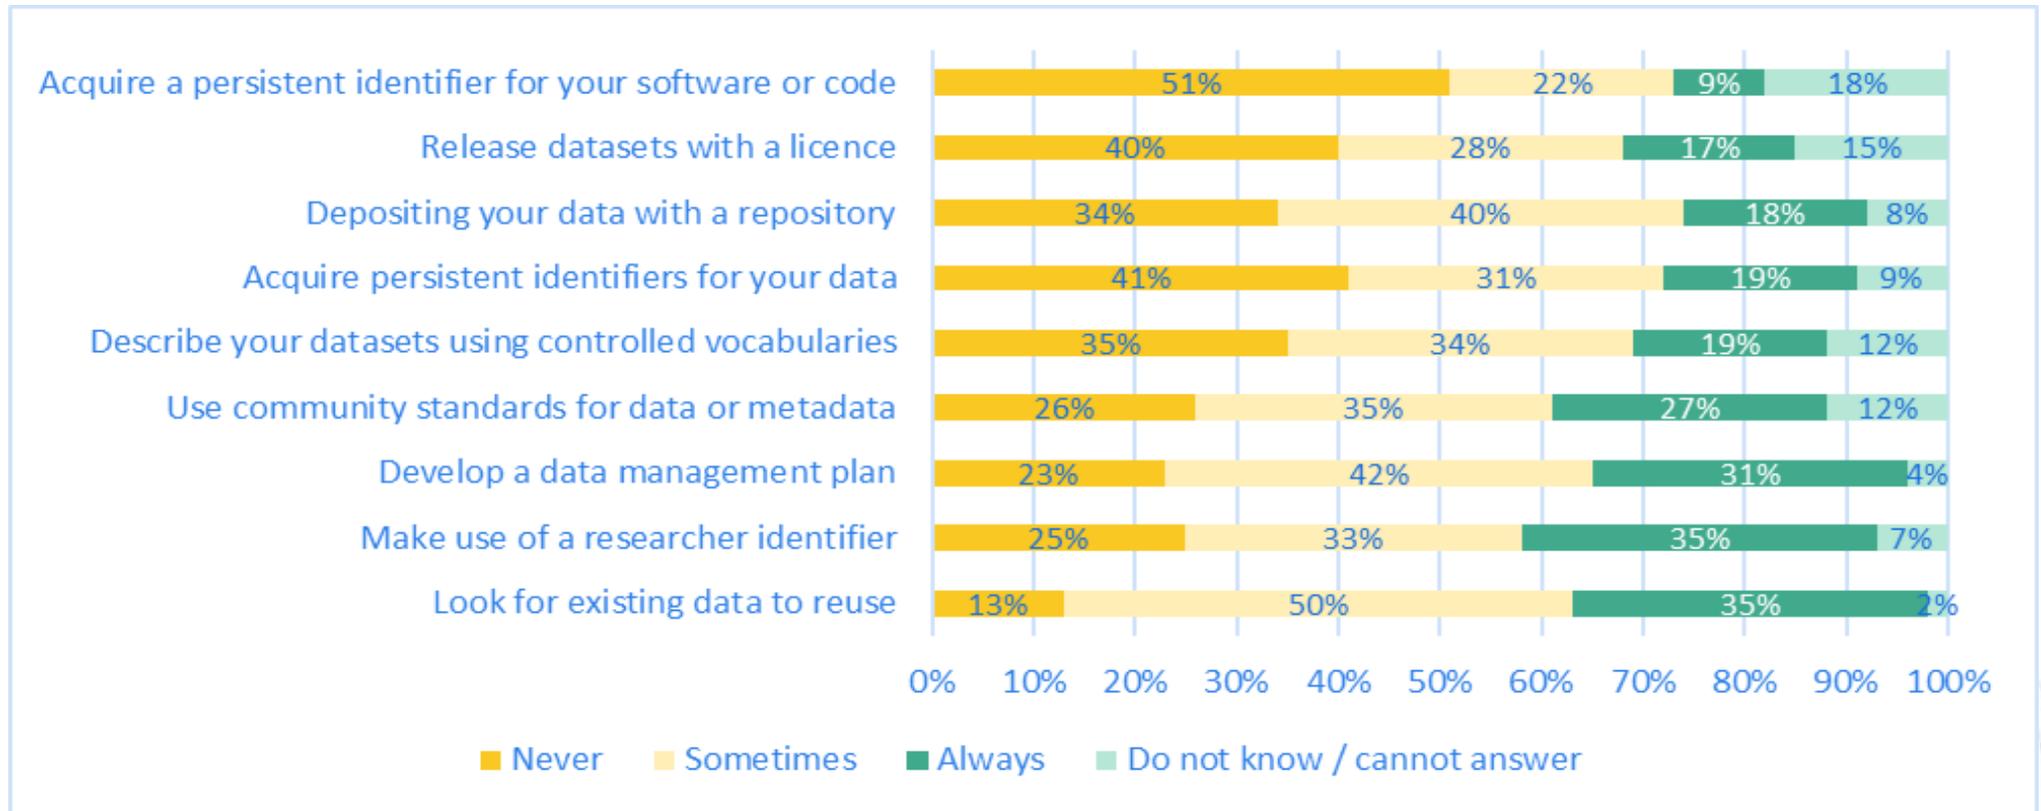

- About **2/3** researchers have **some level of familiarity** with the FAIR principles.
- More than **1/3** researchers have **never heard** of FAIR principles.

Source: European Research data landscape study 2022 commissioned by the European Commission  
Elaboration by the study performers based on unweighted researchers' survey data. Total N=11,849

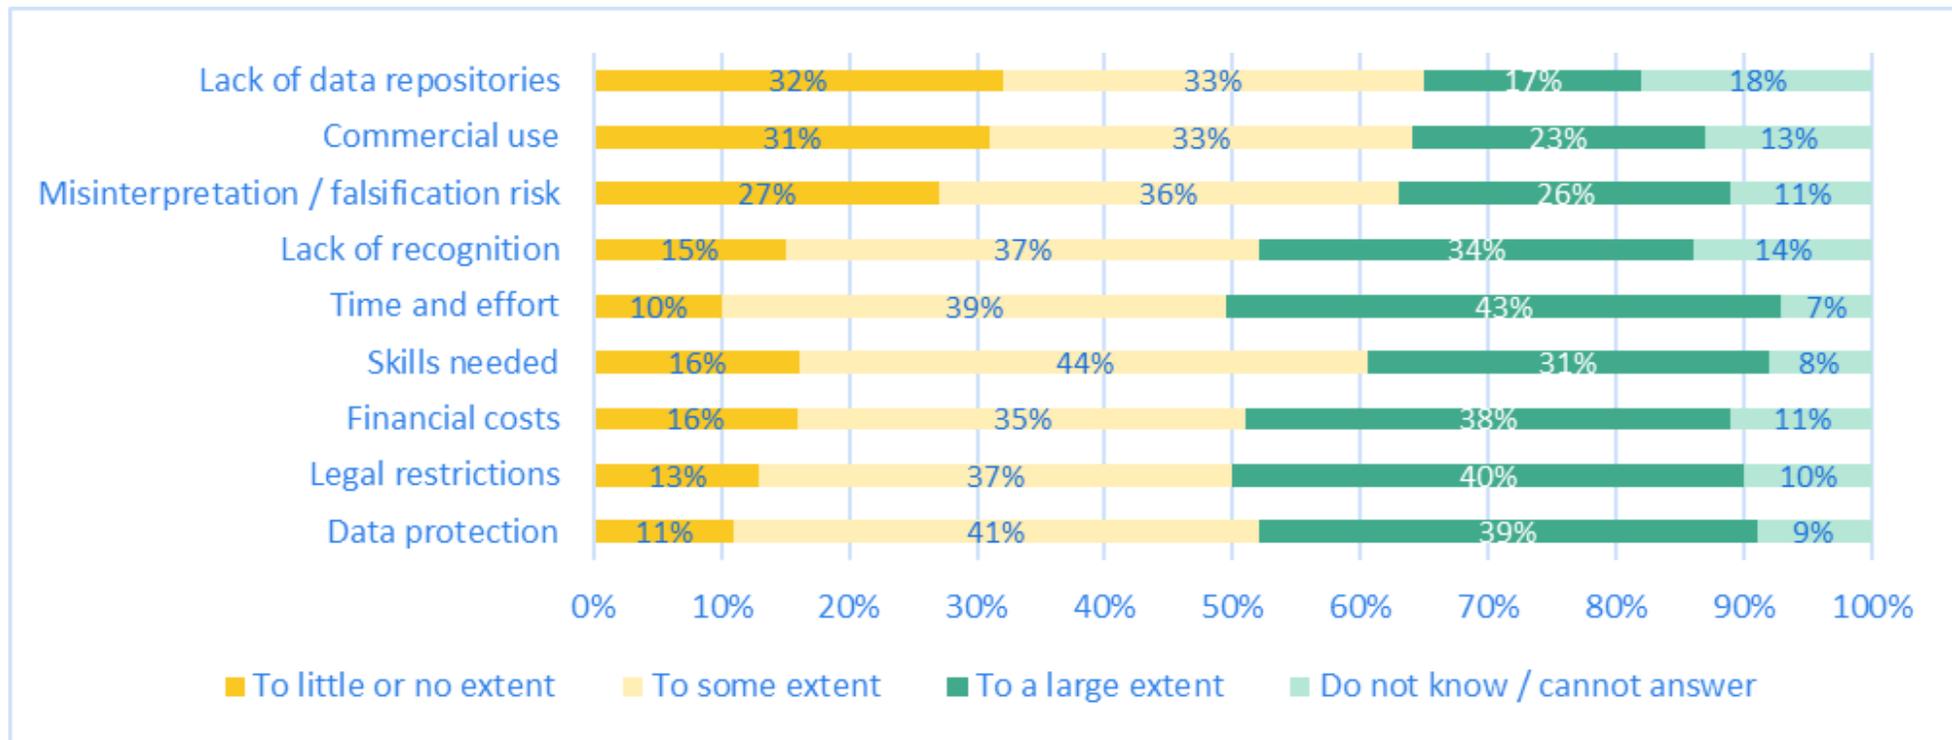

# FAIR aligned practices

- More than **2/3** researchers develop **DataManagementPlans** but other FAIR-aligned practices are less common.
- **Allocating PIDs to data is the least common practices**

Source: European Research data landscape study 2022 commissioned by the European Commission  
 Elaboration by the study performers based on unweighted researchers' survey data. N=10,868-10,889, depending on option

- **Time, effort** and **financial costs** required for RDM and data sharing are seen as a challenge
- **Data protection** and **legal restrictions** are also seen as big obstacles
- **Lack of recognition** also seen as a major barrier

Source: European Research data landscape study 2022 commissioned by the European Commission  
 Elaboration by the study performers based on unweighted researchers' survey data. N=9,898 (selected at least one option).

# Funding Policies

- Up to 0.83% to 2.16% of the GDP is spent on research. This is well below the target of 3% in all countries.
- In several countries' investment strategies for research infrastructures, e-Infrastructures and data infrastructures are aligned to either national or European investment strategies.
- Only few countries have Open Science investment strategies in place.

*Dale Robertson - EOOSC Synergy Perspective and Recommendations on Funding*

# Funding Model

**EOSC Pillar** To identify a single funding model for EOSC is very challenging and not an appropriate solution.

The financial models differ depending on the type of resources provided. Funders and the broader research community need to think about the transition from project funding to sustained funding. EU calls within Horizon Europe, does not suffice

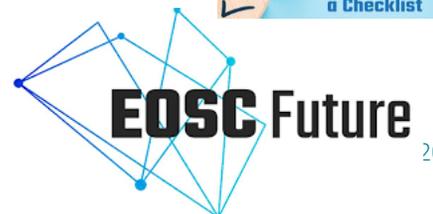

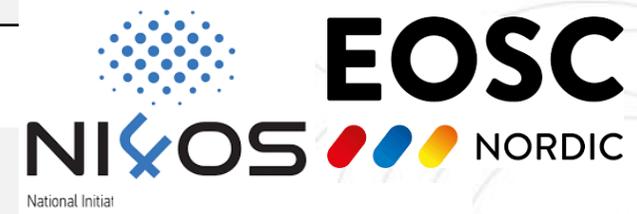

5 EC funding for EOSC should be substantially complemented by national funding linked to the specific investments (percentage-based fees), pay-per-use, subscription and public funding. Cost-sharing of infrastructure works if there is a clear scaling advantage, advertising, commissioning

Rebecca Reichenbach - Getting a Grip on Sustainability

The new governance framework for digital transition launched in March 2021 by the European Commission (EDIC - European Digital Infrastructure Consortium) for funding

	Advertising	Commissioning	Pay-per-use	Subscription	Public funding
Data as a Service				x	x
Platform as a Service	x	x	x		
Software as a Service	x				x

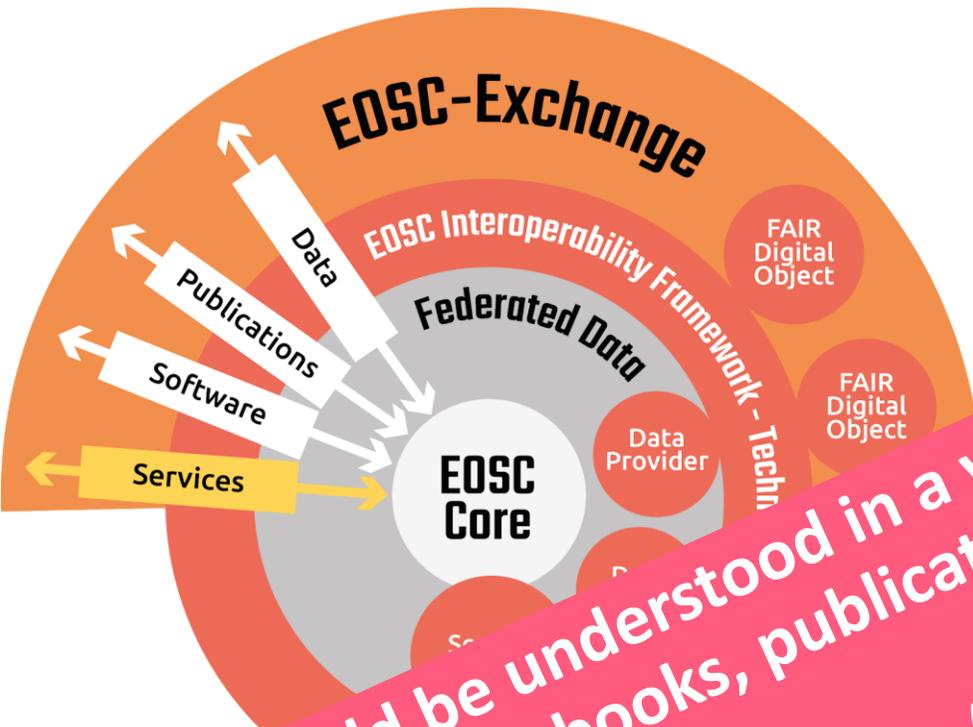

Lars Fischer - Funding Models supporting Cross Border Collaborations

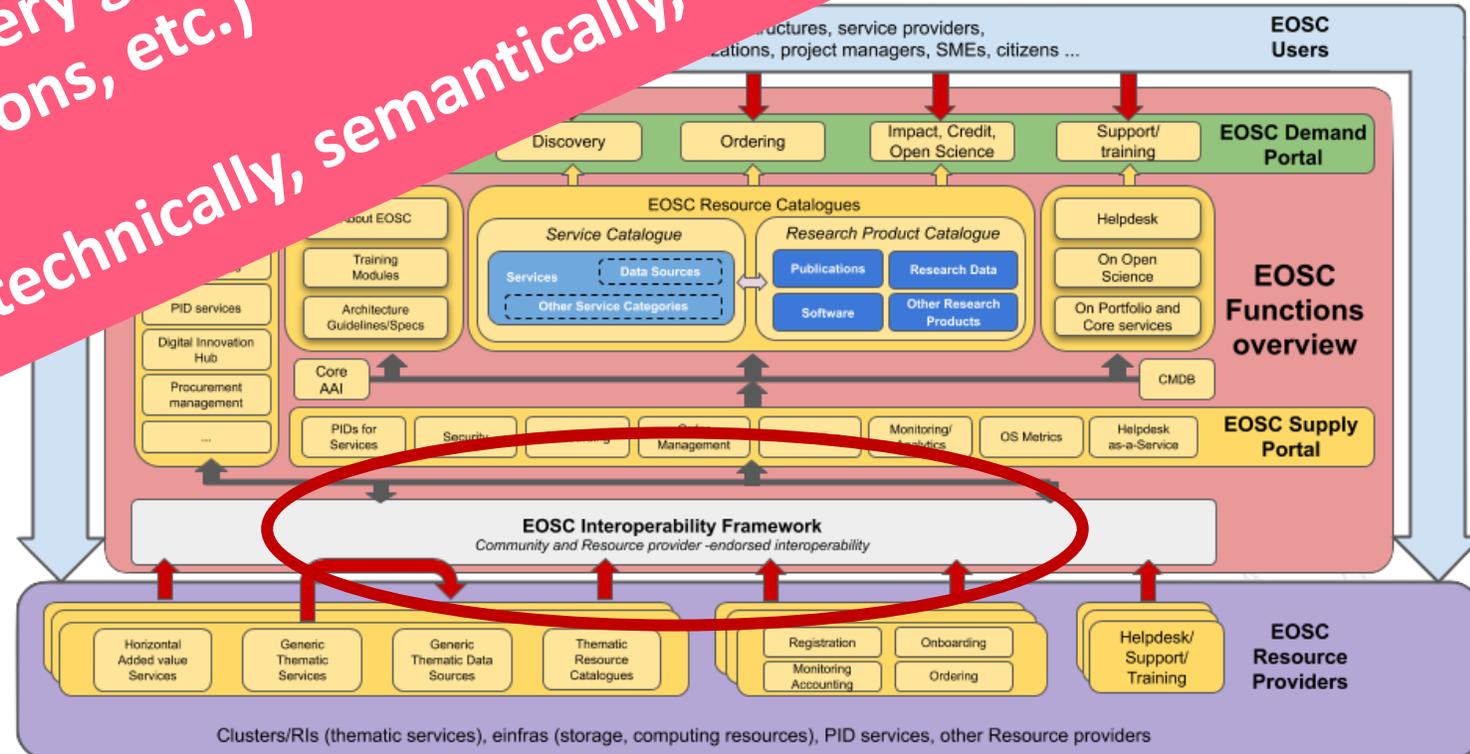

# Interoperability framework

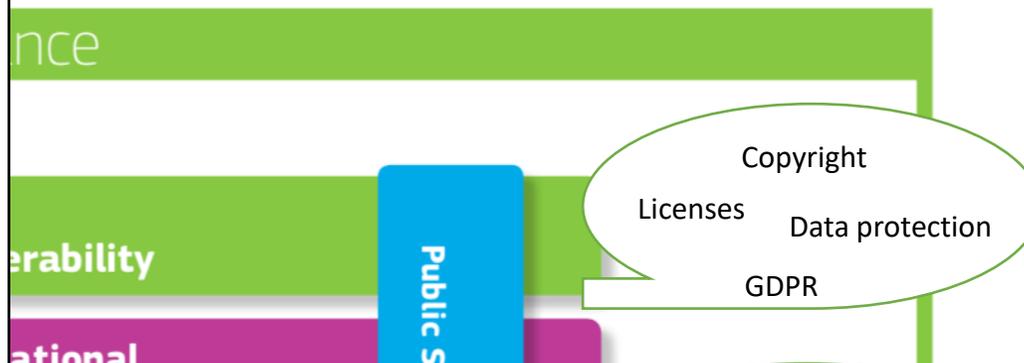

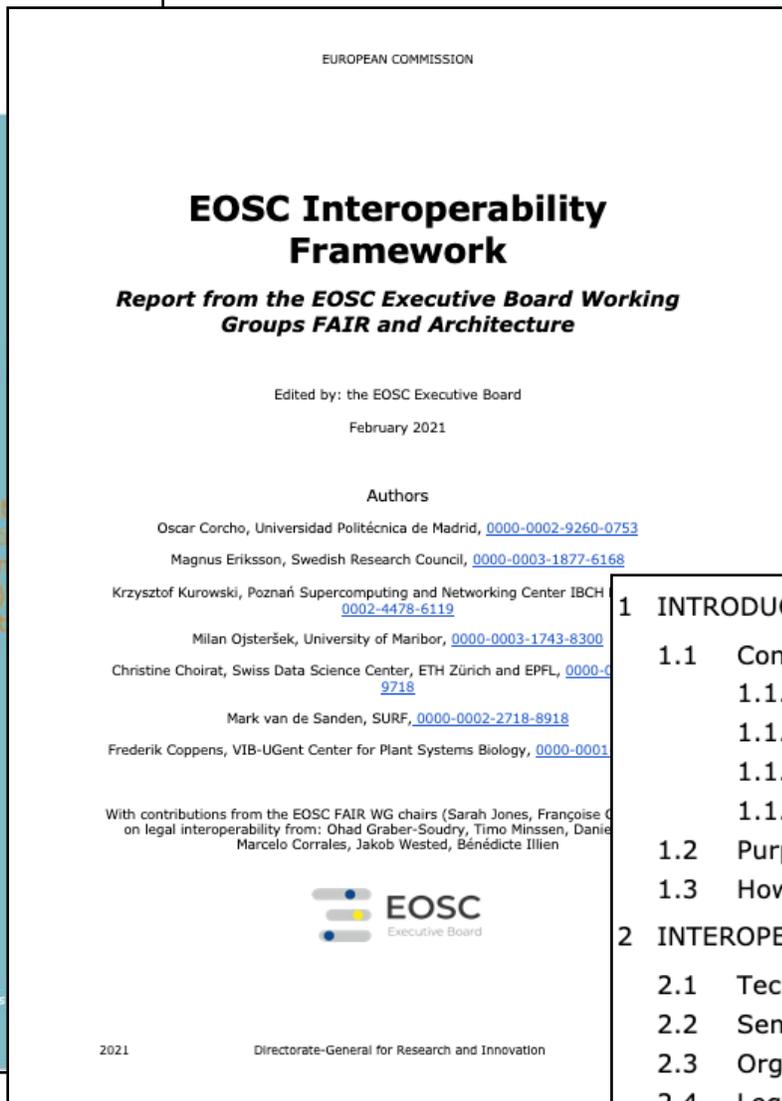

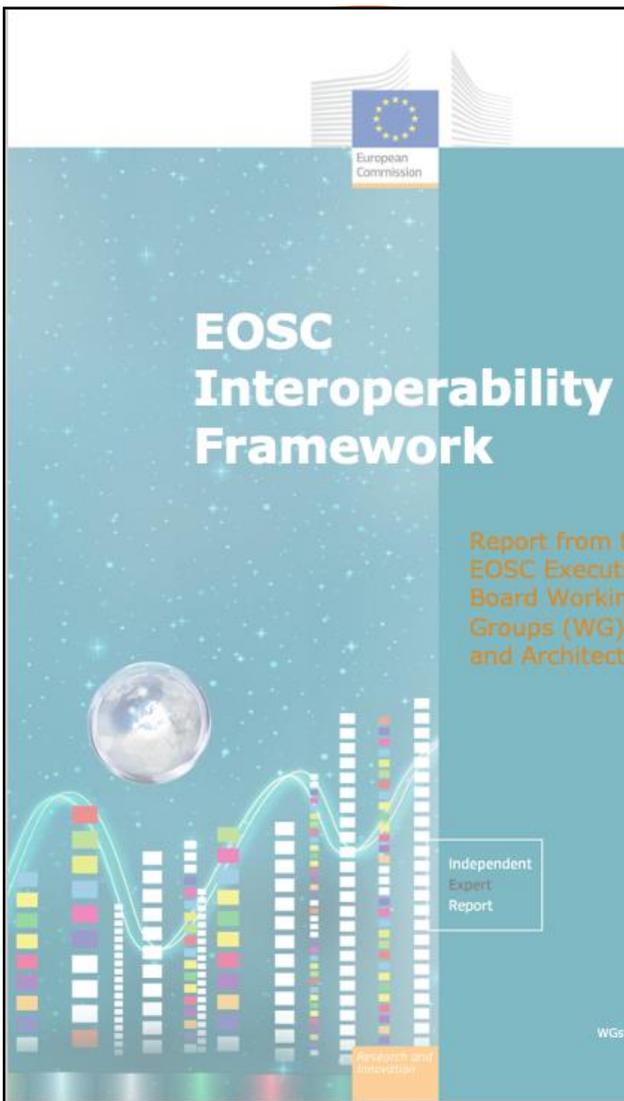

# EOSC Interoperability Framework in cont

Data should be understood in a very general manner (also software, workflows, notebooks, publications, etc.)  
As interoperable as possible (technically, semantically, legally, ...)

1	INTRODUCTION .....	6
1.1	Context and definitions .....	6
1.1.1	The European Open Science Cloud (EOSC)	6
1.1.2	FAIR principles and the role of Interoperability	6
1.1.3	The European Interoperability Framework as a Starting Point	7
1.1.4	Definitions of relevant terms used in this document	7
1.2	Purpose and scope .....	9
1.3	How to read this document.....	9
2	INTEROPERABILITY LAYERS .....	11
2.1	Technical interoperability .....	11
2.2	Semantic interoperability .....	11
2.3	Organisational interoperability .....	12
2.4	Legal interoperability .....	12

# Global Initiatives

# eosc Open Science Global Initiatives

All Major Regions recognise the importance of Open Science

*“When **research is widely available to other researchers and the public**, it can save lives, provide policymakers with the tools to make critical decisions, and drive more equitable outcomes across every sector of society,”*

*“The American people fund tens of billions of dollars of cutting-edge research annually. There should be no delay or barrier between the American public and the returns on their investments in research.”*

**Dr. Alondra Nelson, Head of Office of Science and Technology Policy. USA**  
**[OSTP Issues Guidance to Make Federally Funded Research Freely Available Without Delay](#)**

*“The Research Center for Open Science and Data Platform (RCOS) was established at the National Institute of Informatics (NII) for the purpose of developing and operating research data infrastructure, thereby laying the foundation of **Open Science in Japan**. Research is expected to shift to a new research paradigm, specifically Open Science, through the open collaboration and sharing of research publications and data within academia and beyond, thus accelerating the progress of research and meeting the social challenges of today.”*

**Formed by National Institute of Informatics & Japan Science and Technology Agency**  
**[Research Center for Open Science and Data Platform \(RCOS\), National Institute of Informatics](#)**

*“To make the transition to an open science culture, **Australia** needs a national strategy. Such a strategy should bring together Australian governments, funding agencies, universities and other actors in the research sector.”*

**[Call for an Australian Open Science Strategy](#)**

*“The objective of the **Roadmap for Open Science** is to provide overarching principles and recommendations to guide Open Science activities in Canada.”*

*“This Roadmap outlines next steps that should be taken to make federal science open to all, while respecting privacy, security, ethical considerations and appropriate intellectual property protection.”*

**Mona Nemer, Chief Science Advisor of Canada**  
**[Canadian Roadmap for Open Science](#)**

*“The **African Open Science Platform** – a multi-institutional and multidimensional initiative – makes a case for bold actions to mobilise the African scientific community in response to the opportunities and challenges presented by the digital world through open science. This platform provides African scientists with the necessary tools and concepts for practising open science, the stimulus for excellence in open science, and pathways to its application in the environment, business and society”*

**Dr Sepo Hachigonta and Dr Aldo Stroebel**  
**[The African Open Science Platform](#)**

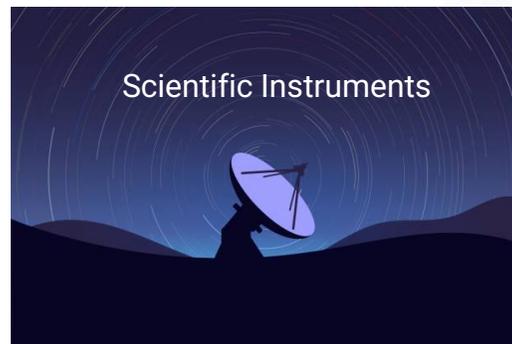

*“Recognizing the urgency of addressing complex and interconnected environmental, social and economic challenges for the people and the planet, including poverty, health issues, access to education, rising inequalities and disparities of opportunity, increasing science, technology and innovation gaps, natural resource depletion, loss of biodiversity, land degradation, climate change, natural and human-made disasters, spiralling conflicts and related humanitarian crises”*

**[UNESCO Recommendation on Open Science](#)**

# Towards a Global Open Science Landscape

Uniting a plethora of stakeholders

# eosc The Global Open Science Cloud Landscape

EGI - October 2021

## GOSC Initiative

The **mission of GOSC** is to connect different international, national and regional open science clouds and platforms to create a global digital environment for borderless research and innovation.

It **aims** to provide better ways to harness digital resources from around the world, **help** bridge the division in infrastructure, technique and capacity building among different countries, **support** global science collaborations and **foster** truly international science.

## Executive summary

This **report** collects the discussions and findings from the 1st Global Open Science Cloud (GOSC), organised during the EGI conference 2020. Each chapter focuses on one special aspect including, preliminary policy landscape, requirements of international science communities, the state-of-the-art of global digital infrastructures, and funding opportunities.

**Chapter 1. GOSC, the Concept and the Preliminary Landscape.**

**Chapter 2. Co-Design of GOSC with Research Communities.**

**Chapter 3. Global e-Infrastructure, Challenges and Opportunities in Achieving the GOSC Vision.**

**Chapter 4. Funding Agencies - Perspectives for GOSC.**

**GOSC is one of the global initiatives that will contribute to the session: Parallel Theme C: Research Infrastructures and Sharing Scientific Data Globally PT C/1: Data Sharing - Global Initiatives – Thursday 20 Oct.**

**In this session also OSCER – CODATA (Open Science Commons Executives' Roundtable - The Committee on Data for Science and Technology) will be presented. Aim: to collaborate in practice towards optimal global interoperability and reuse of data and services for the benefit of Open Science.**
